Dangerous Earth Ellen Prager,2020-03-02 The Earth is a beautiful and wondrous planet but also frustratingly complex and at times violent much of what has made it livable can also cause catastrophe Volcanic eruptions create land and produce fertile nutrient rich soil but they can also bury forests fields and entire towns under ash mud lava and debris The very forces that create and recycle Earth s crust also spawn destructive earthquakes and tsunamis Water and wind bring and spread life but in hurricanes they can leave devastation in their wake And while it is the planet s warmth that enables life to thrive rapidly increasing temperatures are causing sea levels to rise and weather events to become more extreme Today we know more than ever before about the powerful forces that can cause catastrophe but significant questions remain Why can t we better predict some natural disasters What do scientists know about them already What do they wish they knew In *Dangerous Earth* marine scientist and science communicator Ellen Prager explores the science of investigating volcanoes earthquakes tsunamis hurricanes landslides rip currents and maybe the most perilous hazard of all climate change Each

chapter considers a specific hazard begins with a game changing historical event like the 1980 eruption of Mt St Helens or the landfall and impacts of Hurricane Harvey and highlights what remains unknown about these dynamic phenomena Along the way we hear from scientists trying to read Earth s warning signs pass its messages along to the rest of us and prevent catastrophic loss A sweeping tour of some of the most awesome forces on our planet many tragic yet nonetheless awe inspiring Dangerous Earth is an illuminating journey through the undiscovered unresolved and in some cases unimagined mysteries that continue to frustrate and fascinate the world s leading scientists the wish we knew that ignite both our curiosity and global change

Life in the Hothouse Melanie Lenart,2010-05-15 In this insightful compelling and highly readable work Melanie Lenart an award winning journalist and science writer who holds a PhD in Natural Resources and Global Change examines global warming with the trained eye of a professional scientist And she presents the science in a clear straightforward manner Why does the planet s warming produce stronger hurricanes rising seas and larger floods Simple says Lenart The Earth is just doing what comes naturally Just as humans produce sweat to cool off on a hot day the planet produces hurricanes floods wetlands and forests to cool itself off Life in the Hothouse incorporates Lenart s extensive knowledge of climate science including the latest research in climate change and the most current scientific theories including Gaia theory which holds that the Earth has some degree of climate control built in As Lenart points out scientists have been documenting stronger hurricanes and larger floods for many years There is a good reason for this she notes Hurricanes help cool the ocean surface and clear the air of carbon dioxide the main greenhouse gas responsible for global warming From the perspective of Gaia theory these responses are helping to slow the ongoing global warming and Lenart expounds upon this in a clear and understandable fashion There is hope Lenart writes If we help sustain Earth s natural defense systems including wetlands and forests perhaps Mother Earth will no longer need to rely as much on

the cooling effects of what we call natural disasters many of which carry a human fingerprint At a minimum she argues these systems can help us survive the heat *Hurricanes: Read Along or Enhanced eBook* William B.
