2

Document Reprocessing

The scanned image is then preprocessed to enhance its quality. This step may involve removing noise, converting into black and white, improving contrast, and correcting any skew in the image.

3

Character Recognition

The OCR software then identifies the individual characters in the preprocessed image. It does this by analyzing the shapes and patterns of the characters and comparing them with a database of predefined characters. Once a match is found, the corresponding

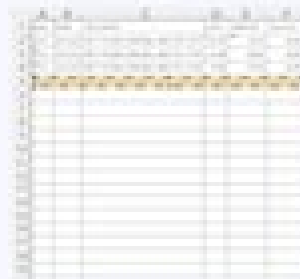

6

Exporting the Data

Finally, the recognized text is exported into a digital format, such as a Word document or Excel spreadsheet. This digital data can then be easily searched, edited, and managed.

5

Verification & Editing

The recognized text is then verified for accuracy. Any errors or inconsistencies are corrected at this stage. This step may involve some manual intervention.

Letters & Words Grouping

The matched characters then are grouped into words, and then into sentences, to form a digital document that mirrors the original source.
