

Chapter 11. Parametric Equations and Polar Coordinates

11.6. Conic Sections

NOTE. Conic sections were first studied by the Greeks about 2300 years ago in connection with the three classic compass and straight-edge constructions: (1) trisection of an angle, (2) doubling the cube, and (3) squaring the circle. Conic sections result from intersecting a plane with two double cones. The three conic sections are the *ellipse* (a circle is a special case of an ellipse), the *parabola*, and the *hyperbola*.
