operation and technique

1.

Remove the thermometer from the case and attach a new probe cover. The device turns on automatically.

2.

Wait for the 'ready' beep and place the probe snugly into the ear canal. Correct probe placement is essential for accurate readings.

- Straighten ear canal
- Aim towards opposite temple

3.

Press and release the Start Button. The thermometer will beep once. The green ExacTemp light above the Start Button flashes, indicating correct probe placement.

4.

A long beep and a solid green ExacTemp light signals the end of an accurate measurement. Eject the used probe cover. For the next measurement, put on a new, clean probe cover.

5.

If the probe is placed incorrectly or was moved while taking a temperature, the device beeps, the green ExacTemp light goes out and POS (Position Error) displays.

6.

Press I/O button to recall the last temperature.

7.

To change default temperature scale: With the device off, press and hold the I/O button for about 5 seconds. Release the I/O button when desired scale is shown.
