### **Multiple Intelligences and Digital Technologies for Enhanced Learning Opportunities** Zheng, Robert Z.,2019-09-27

Multiple intelligences MI as a cognitive psychology theory has significantly influenced learning and teaching Research has demonstrated a strong association between individual intelligences and their cognitive processes and behaviors However it remains unknown how each of or a combination of these intelligences can be effectively optimized through instructional intervention particularly through the use of emerging learning technology On the other hand while efforts have been made to unveil the relationship between information and communication technology ICT and individual learner performance there is a lack of knowledge in how MI theory may guide the use of ICTs to enhance learning opportunities for students Examining Multiple Intelligences and Digital Technologies for Enhanced Learning Opportunities is an essential reference book that generates new knowledge about how ICTs can be utilized to promote MI in various formal and informal learning settings Featuring a range of topics such as augmented reality learning analytics and mobile learning this book is ideal for teachers instructional designers curriculum developers ICT specialists educational professionals administrators instructors academicians and researchers **Numeracy in Authentic Contexts** Maura Sellars,2017-10-25 This book is based on the

notion that there are many ways in which mathematics learning can be achieved for students and that not all of them are focused on the mathematics classroom It explores the foundational numeracy principles of the non mathematical subject areas and aligns these to the Australian numeracy learning continuum It demonstrates in detail the extent to which numeracy competencies underpin successful learning in all the subject areas of the curricula It validates a focus of developing numeracy competencies through learning in the arts science and other discipline areas with which school students to engage with in order develop holistically but which are not subjected to national assessment practices It is developed around the notion of praxis putting theory into practice in order to respond to the urgent need for students to be supported in their efforts to increase their numeracy capabilities in a world where extensive amounts of new information are often presented in graphical or data based formats Additionally it offers perspectives on developing all students capacities to become numerate in school contexts and presents inclusive differentiated lesson examples as an alternative way of exploring numeracy in the context of teaching and learning in real world classroom contexts
