The committee concluded that improving the diagnostic process is not only possible but also represents a moral professional and public health imperative. Improving Diagnosis in Health Care, a continuation of the landmark Institute of Medicine reports *To Err Is Human* 2000 and *Crossing the Quality Chasm* 2001, finds that diagnosis and in particular the occurrence of diagnostic errors has been largely unappreciated in efforts to improve the quality and safety of health care. Without a dedicated focus on improving diagnosis, diagnostic errors will likely worsen as the delivery of health care and the diagnostic process continue to increase in complexity. Just as the diagnostic process is a collaborative activity, improving diagnosis will require collaboration and a widespread commitment to change among health care professionals, health care organizations, patients and their families, researchers, and policy makers. The recommendations of *Improving Diagnosis in Health Care* contribute to the growing momentum for change in this crucial area of health care quality and safety.
