Textbook of Radiographic Positioning and Related Anatomy John Lampignano, Leslie E. Kendrick, 2024-02-16 Selected for Doody s Core Titles 2024 in Radiologic Technology Gain the knowledge and skills you need to succeed as a radiologic technologist Textbook of Radiographic Positioning and Related Anatomy 11th Edition provides the essential information that you need to perform hundreds of radiographic procedures and produce clear diagnostic quality images Easy to follow guidelines help you learn anatomy and positioning and minimize imaging errors In fact each positioning page spotlights just one projection with bulleted information on the left side of the page and positioning photos anatomical drawings and correctly positioned and correctly exposed radiographic images on the right Written by imaging experts John P Lampignano and Leslie E Kendrick this book also provides excellent preparation for the ARRT certification examination Labeled radiographs radiographic overlays identify key radiographic anatomy and landmarks to help you recognize anatomy and determine if you have captured the correct diagnostic information on images

Coverage of the latest ARRT content specifications and ASRT curriculum guidelines prepares you for certification exams and for clinical practice. Display of just one projection per page in Positioning chapters presents a manageable amount of information in an easily accessible format. Positioning pages for projections show positioning photographs plus radiographic and anatomy labeled images side by side on a single page with written summaries of topics such as clinical indications, technical factors, patient and body part positions, recommended collimation field size, and evaluation criteria. Clinical Indications sections on positioning pages summarize conditions or pathologies that may be demonstrated by structures or tissues in an examination or projection. Evaluation Criteria on positioning pages describe the evaluation critique process that should be completed for each radiographic image. Pediatric, Geriatric, and Bariatric Patient Considerations help you accommodate unique patient needs. Critique images at the end of positioning chapters test your understanding of common positioning and technical errors found in radiographs. Review questions are provided on the Evolve website. NEW Updated photographs visually demonstrate the latest digital technology used in radiography with new radiographs as well as images of positioning and new equipment. NEW The latest ARRT content specifications and ASRT curriculum guidelines prepare you for certification exams and for clinical practice. NEW Updated radiographic projections have been reviewed and recommended by orthopedists, radiologists, educators, and technologists. NEW Expanded information on the bariatric patient is included, and coverage of outdated technology and positions is eliminated.

Textbook of Radiographic Positioning & Related Anatomy - Pageburst E-Book on VitalSource

8 Kenneth L. Bontrager, John Lampignano, 2013-02-08

Lists and definitions of the most common pathologies likely to be encountered during specific procedures help you understand the whole patient and produce radiographs that will make diagnosis easier for the physician. Labeled radiographs identify key radiographic anatomy and landmarks to help you determine if you have captured the correct diagnostic information on your images. Evaluation Criteria for each projection provide standards for evaluating the quality of each radiograph and help you produce the highest quality images. Clinical Indications sections explain why a projection is needed or what pathology is demonstrated to give you a better understanding of the reasoning behind each projection. Increased emphasis on digital radiography keeps you up to date with the most recent advances in technology. Completely updated content offers expanded coverage of important concepts such as digital imaging systems, updated CT information, and AART exam requirements. More CT procedures with related sectional images, especially for areas such as skull and facial bones, reflect the shift in the field from conventional radiography to CT. Updated art visually demonstrates the latest concepts and procedures with approximately 500 new positioning photos and 150 updated radiographic images. Additional critique images provide valuable experience analyzing images to prepare you to evaluate your own images in the practice environment. Updated Technique and Dose boxes reflect the higher kV now recommended for computed and digital radiography. Imaging Wisely program information from ASRT provides protocols to minimize radiation exposure during digital procedures. The latest standards for

computed radiography and digital radiography CR DR from the American Association of Physicists in Medicine ensures you are current with today's procedures and modalities

Bioengineering Liver Transplantation Luc J.W. Van der Laan, Bart Spee, Monique M. A. Verstegen, 2019-11-19 The aim of this Special Issue is to review, understand and evaluate new and exciting opportunities from the field on regenerative medicine, biomaterials and stem cell research for the bioengineering of human liver grafts that can be applied for transplantation and personalized treatment of end stage liver disease. The development of culture conditions for long term expansion of LGR5 intestinal stem cells as crypt villus structures demonstrated the feasibility of deriving complex organ like structures in vitro from primary adult tissues including the liver. Moreover, human pluripotent stem cells hPSCs can be applied to generate functionally matured liver and bile duct epithelial cells. In this Special Issue, we welcome reviews and original papers focussing on hepatic cell sources including adult hepatic stem cells, organoids, fetal and induced pluripotent stem cells and primary cells, i.e. hepatocytes, cholangiocytes and endothelial cells and how these cells can be applied in tissue engineering strategies to generate implantable and personalized liver grafts. Potential topics include but are not limited to the following: liver tissue engineering, liver regeneration, graft repair, liver stem cells and organoids, bio scaffolds and 3D printing. We invite you to contribute original research papers as well as comprehensive reviews aligned with these themes to advance and improve the actual state of the art in liver bioengineering and providing new opportunities for the imminent medical problem of organ and tissue shortage for transplantation.
