

Accounting Theory

The beginning of the 'trade' era marked the birth of one of the most significant concepts of business world known as Accounting. In simplest terms, accounting can be defined as the art of 'systematic recording, reporting and analysis of financial transactions of a business' [WebFinance Inc.].

This practice can be traced from thousands of years back when people relied on primitive accounting methods to record the growth of crops and herds. Today accounting is considered as the 'backbone' of most successful businesses. Since old days, a number of theories have been tested and incorporated that have lead to the evolution of accounting practices over the years.

The growing demand of globalisation in the business world marked the necessity to use accounting with 'specific rules and regulations' in order for it to be 'reliable and comprehensible.' It would be complete chaos if each business follows its own rules, grammar and vocabulary to record transactions.

As stated by Michael Russel in his paper 'The Origin of Accounting Theory', 'The first prerequisite is that accounting should agree with the basic truths according to which our economic system functions. Accounting theory (therefore) creates a framework that ensures that accounting practice complies with the requirements of conformity and uniformity.'

[Russel] Like any other theory, accounting theory is also based on a set of rational ideas which in this case is 'the economic truths'; and these ideas and principles have evolved over time depending on the need of the business. However, the common elements or in other words, the fundamental backbone of accounting is still the same which includes 'bookkeeping' (Gaffikin, 2008, pg. 16).

What has actually changed is the techniques employed in carrying out this task and this is mainly due to the drastic advancement in information technology. 'Many accountants are now involved with the provision of financial advice rather than mechanical recording and reporting procedures. In addition, the form of this advice has also changed.

'It once involved cost reporting and analysis of financial statements; it now involves modern information technology media.' (Gaffikin, 2008, pg. 18)

Despite these developments, the evolution of accounting theories has faced some major challenges. First one deals with reporting of non-financial 'events' such as performance of employees in the firm. 'Should their performance be measured based on educational backgrounds, work experiences or the expenditure that their employers pay on them?'
