Petroleum Fluids McCain Solutions Manual:

Formulas and Calculations for Drilling Operations James G. Speight, 2018-04-10 Newly revised this is still the must have guide for any drilling production or petroleum engineer with thousands of handy formulas and calculations that the engineer needs on a daily basis Presented in an easy to use format this second edition of Formulas and Calculations for Drilling Operations is a quick reference for day to day work out on the rig It also serves as a handy study guide for drilling and well control certification courses Virtually all the mathematics required on a drilling rig is here in one convenient source including formulas for pressure gradient specific gravity pump output annular velocity buoyancy factor and many other topics Whether open on your desk on the hood of your truck at the well or on an offshore platform this is the only book available that covers the gamut of the formulas and calculations for petroleum engineers that have been compiled over decades Some of these formulas and calculations have been used for decades while others are meant to help guide the engineer through some of the more recent breakthroughs in the industry s technology such as hydraulic fracturing and enhanced oil recovery There is no other source for these useful formulas and calculations that is this thorough An instant classic when the first edition was published the much improved revision is even better offering new information not available in the first edition making it as up to date as possible in book form Truly a state of the art masterpiece for the oil and gas industry if there is only one book you buy to help you do your job this is it

Integrated Modeling of Reservoir Fluid Properties and Multiphase Flow in Offshore Production Systems Tobias R. Gessner, Jader R. Barbosa Jr., 2023-10-03 The book is intended for practicing engineers in the oil industry researchers and graduate students interested in designing and simulating offshore hydrocarbon production systems It approaches offshore oil production systems from an integrated perspective that combines the modeling of thermophysical properties of reservoir fluids and their flow as a multiphase mixture in wellbores flow lines and risers The first part of the book presents an internally consistent method to compute the critical parameters and acentric factor of Single Carbon Number SCN fractions of petroleum mixtures using state of the art multivariate fitting techniques The procedure is illustrated and validated using flash and differential liberation data from actual field samples In the second part of the book mechanistic multiphase flow models are discussed in light of their ability to predict the pressure temperature and phase holdup of production fluids in wellbores flow lines and risers Multivariate fitting procedures are again applied to evaluate the sensitivity of the results with respect to closure relationship parameters such as slug body gas holdup wall shear stress and wall roughness in pipelines and production tubing Finally the modeling framework is validated using actual field data from offshore production wells
