Chen's Anatomy MCQ's

Why did we publish this book

We believe that anatomy can be EASY to learn and more importantly we believe it can be INTERESTING to learn

Unfortunately anatomy teaching has been too focused on rote learning and memorization of dry facts and images

Modern anatomy should place more emphasis on clinical application and everyday relevance

We are hoping to strike a happy balance of pure text anatomy and clinical anatomy

The questions in this book are designed to mirror questions of the university anatomy exam and provide clinical scenarios that give you clinical bases for understanding and practicing what you've learnt

How to use this book

The book is divided into 3 sections

- 1 Multiple choice questions Quick fire questions to test your knowledge of pure anatomy
- 2 Clinical scenario questions In depth question that focuses on common clinical scenarios
- 3 Short answer questions for discussion Open ended questions to inspire individual and group discussion

We suggest you carry the book with you quiz yourself and your friends when you have a free moment

Remember that this is not a replacement for your anatomy text but an adjunct for your studies and revision

We hope this book whets your appetite for further anatomy research and study

Expanding knowledge through self learning and discovery

Locket's 3D Anatomy Cutouts provides a practical approach to learning human anatomy

It contains a series of paper cutouts which isolate various functional components and anatomical regions

Every student can label colour in cut out and join parts together to create in depth three dimensional anatomical diagrams

This unique book encourages students to become active hands on learners away from the dissecting room

It is ideal for all students in health and medical related subjects where an understanding of human anatomy is essential

The cutouts contained in this volume have been researched and developed over forty years by the late Dr Adam Locket a former senior lecturer in anatomy at the University of Adelaide and edited by Dr Rachel Norris University of Adelaide and Amy McLennan University of Oxford

Full instructions for each cutout as well as questions highlighting important points allow students to build a strong understanding of anatomical relationships and functions while simultaneously building a model that can be used for future reference
