

## Lesson 11: Properties of Tangents

### Student Outcomes

- Students demonstrate that a tangent to a circle at a given point  $P$  is perpendicular to the radius drawn to that point.
- Students understand tangents to a circle through a point  $P$  outside.
- Students prove that tangent segments to a circle from the same point are congruent lengths.

### Lesson Overview

Pages 1–12 begin the study of tangents to a circle. Lesson 11 is the concluding lesson and explores several consequences to tangents to a circle. The study of tangents continues in Lesson 12 and 13.

During the lesson, model the following definitions if necessary.

**Intersection of a circle:** The intersection of a circle with another (straight) circle is the point of tangency to the circle where they meet. See the point  $P$  in the figure.

A point on the intersection circle is said to be inside the circle, and all the points of the circle with the center.

**Distance to a circle:** The distance of a circle with center  $O$  and radius  $r$  is the length of the line segment from the center  $O$  to the point  $P$ .

A point outside a circle is said to be outside the circle.
