S. Tiwary, 2009 *The Consumer Response to Gasoline Price Changes* Kenneth Thomas Gillingham, 2011 When gasoline prices rise people notice the news is filled with reports of pinched household budgets and politicians feeling pressure to do something to ameliorate the burden Yet raising the gasoline tax to internalize externalities is widely considered by economists to be among the most economic efficiency improving policies we could implement in the transportation sector This dissertation brings new evidence to bear on quantifying the responsiveness to changing gasoline

prices both on the intensive margin i.e. how much to drive and the extensive margin i.e. what vehicles to buy. I assemble a unique and extremely rich vehicle level dataset that includes all new vehicle registrations in California 2001 to 2009 and all of the mandatory smog check program odometer readings for 2002 to 2009. The full dataset exceeds 49 million observations. Using this dataset, I quantify the responsiveness to gasoline price changes on both margins as well as the heterogeneity in the responsiveness. I develop a novel structural model of vehicle choice and subsequent utilization where consumer decisions are modeled in a dynamic setting that explicitly accounts for selection on unobserved driving preference at both the time of purchase and the time of driving. This utility consistent model allows for the analysis of the welfare implications to consumers and government of a variety of different policies including gasoline taxes and feebates. I find that consumers are responsive to changing gasoline prices in both vehicle choice and driving decisions with more responsiveness than in many recent studies in the literature. I estimate a medium run i.e. roughly two year elasticity of fuel economy with respect to the price of gasoline for new vehicles around 0.1 for California, a response that varies by whether the vehicle manufacturer faces a tightly binding fuel economy standard. I estimate a medium run elasticity of driving with respect to the price of gasoline around 0.15 for new personal vehicles in the first six years. Older vehicles are driven much less but tend to be more responsive with an elasticity of roughly 0.3. I find that the vehicle level responsiveness in driving to gasoline price changes varies by vehicle class, income, geographic and demographic groups. I also find that not including controls for economic conditions and not accounting for selection into different types of new vehicles based on unobserved driving preference tend to bias the elasticity of driving away from zero, implying a greater responsiveness than the true responsiveness. This is an important methodological point for much of the literature estimating similar elasticities ignores these two issues. These results have significant policy implications for policies to reduce gasoline consumption and greenhouse gas emissions from transportation. The relatively inelastic estimated responsiveness on both margins suggests that a gasoline tax policy may not lead to dramatic reductions in carbon dioxide emissions but is a relatively non-distortionary policy instrument to raise revenue. When the externalities of driving are considered, an increased gasoline tax may not only be relatively non-distortionary but even economically improving. However, I find that the welfare changes from an increased gasoline tax vary significantly across counties in California, an important consideration for the political feasibility of the policy. Finally, I find suggestive evidence that the rebound effect of a policy that works only on the extensive margin such as a feebate or CAFE standards may be closer to zero than the elasticity of driving with respect to the price of gasoline. This suggestive finding is particularly important for the analysis of the welfare effects of any policy that focuses entirely on the extensive margin.

Performance Exhaust Systems Mike Mavrigian, 2014-08-15 To extract maximum performance, an engine needs an efficient, well designed and properly tuned exhaust system. In fact, the exhaust system's design components and materials have a large impact on the overall performance of the engine. Engine builders and car owners need to carefully consider the exhaust layout, select the

parts and fabricate the exhaust system that delivers the best performance for car and particular application Master engine builder and award winning writer Mike Mavrigian explains exhaust system principles function and components in clear and concise language He then details how to design fabricate and fit exhaust systems to classic street cars as well as for special and racing applications Air exhaust gas flow dynamics and exhaust system design are explained Cam duration and overlap are also analyzed to determine how an engine breathes in air fuel as the exhaust must efficiently manage this burned mixture Pipe bending is a science as well as art and you re shown how to effectively crush and mandrel bend exhaust pipe to fit your header manifold and chassis combination Header tube diameter and length is taken into account as well as the most efficient catalytic converters and resonators for achieving your performance goals In addition Mavrigian covers the special exhaust system requirements for supercharged and turbocharged systems When building a high performance engine you need a high performance exhaust system that s tuned and fitted to that engine so you can realize maximum performance This comprehensive book is your guide to achieving ultimate exhaust system performance It shows you how to fabricate a system for custom applications and to fit the correct prefabricated system to your car No other book on the market is solely dedicated to fabricating and fitting an exhaust system in high performance applications

[The Sociology of Religion](#) George Lundskow,2008-06-10 Most Sociology of Religion texts are decidedly staid and uninteresting covering contemporary developments which are only contemporary only from a disciplinary perspective They are not contemporary if viewed from the perspective of the religion s practioners in religious and non religious settings The textbooks that attempt to be interesting to undergraduate students often fall short because they either try to cover too much in an encyclopedic format or sacrifice a sociological perspective for a personal one Many use real life examples only superficially to illustrate concepts Lundskow s approach is the opposite students will learn the facts of religion in its great diversity all the most interesting and compelling beliefs and practices and then learn relevant concepts that can be used to explain empirical observations The book thus follows the logic of actual research investigate and then analyze rather than approaching concepts with no real bearing on how religion is experienced in society This approach using provocative examples and with an eye toward the historical and theoretical not to mention global experience of religion will make this book a success in the classroom The author envisions a substantive approach that examines religion as it actually exists in all its forms including belief ritual daily living identity institutions social movements social control and social change Within these broad categories the book will devote particular chapters to important historical moments and movements leaders and various individual religions that have shaped the contemporary form and effect of religion in the world today
