Nanocarriers in Plant Science and Agriculture Chen, Jen-Tsung, 2025-05-23 For decades nanomaterials have been widely recognized for their benefits in biological applications that are mostly contributed by the engineered structures for the capacity to carry chemicals and biomolecules to the target sites In plant research and agricultural biotechnology nanocarriers are expected to enhance plant growth and development by delivering a range of cargos Additionally nucleic acids may enhance genetic

engineering and epigenetic modulations Thus strategies based on nanocarriers may be used for crop breeding and managing plant abiotic stress and diseases offering valuable resources for the field of agriculture Nanocarriers in Plant Science and Agriculture fills the knowledge gap in the molecular mechanisms of nanocarriers and highlights the subtopics of their applications on genetic engineering and genome editing such as clustered regularly interspaced short palindromic repeats CRISPR edited crops and delivering chemicals Additionally it includes critical types of nanocarriers are included such as biogenic nanocarriers metallic nanocarriers polymeric nanocarriers and carbon nanotubes Covering topics such as targeted delivery carbon nanotubes and pesticides this book is an excellent resource for plant scientists materials scientists agriculture biotechnologists professionals researchers scholars academicians and more

Polymer Engineering Bartosz Tylkowski, Karolina Wieszczycka, Renata Jastrzab, 2017-09-25 Polymer Engineering focuses on the preparation and application of polymers in several hot topics such as artificial photosynthesis water purification by membrane technologies and biodiesel production from wastewater plants The authors not only describe the latest developments in polymer science but also support these experimental results by computational chemistry and modelling studies

Glassy Materials Based Microdevices Giancarlo C. Righini, Nicoletta Righini, 2019-02-28 Microtechnology has changed our world since the last century when silicon microelectronics revolutionized sensor control and communication areas with applications extending from domotics to automotive and from security to biomedicine The present century however is also seeing an accelerating pace of innovation in glassy materials as an example glass ceramics which successfully combine the properties of an amorphous matrix with those of micro or nano crystals offer a very high flexibility of design to chemists physicists and engineers who can conceive and implement advanced microdevices In a very similar way the synthesis of glassy polymers in a very wide range of chemical structures offers unprecedented potential of applications The contemporary availability of microfabrication technologies such as direct laser writing or 3D printing which add to the most common processes deposition lithography and etching facilitates the development of novel or advanced microdevices based on glassy materials Biochemical and biomedical sensors especially with the lab on a chip target are one of the most evident proofs of the success of this material platform Other applications have also emerged in environment food and chemical industries The present Special Issue of Micromachines aims at reviewing the current state of the art and presenting perspectives of further development Contributions related to the technologies glassy materials design and fabrication processes characterization and eventually applications are welcome

Functional Polymers in Food Science Giuseppe Cirillo, Umile Gianfranco Spizzirri, Francesca Iemma, 2015-03-18 Polymers are an important part in everyday life products made from polymers range from sophisticated articles such as biomaterials to aerospace materials One of the reasons for the great popularity exhibited by polymers is their ease of processing Polymer properties can be tailored to meet specific needs by varying the atomic composition of the repeat structure by varying molecular weight and by the incorporation via covalent and non covalent interactions of an enormous range of compounds to impart specific activities In food science the use of polymeric materials is widely explored from both an engineering and a nutraceutical point of view Regarding the engineering application researchers have discovered the most suitable materials for intelligent packaging which preserves the food quality and prolongs the shelf life of the products Furthermore in agriculture specific functionalized polymers are used to increase the efficiency of treatments and reduce the environmental pollution In the nutraceutical field because consumers are increasingly conscious of the relationship between diet and health the consumption of high quality foods has been growing continuously Different compounds e.g. high quality proteins lipids and polysaccharides are well known to contribute to the enhancement of human health by different mechanisms reducing the risk of cardiovascular disease coronary disease and hypertension This second volume focuses on the importance of polymers and functional food and in food processing
