**The Earth Observer** ,2009      Who's Green 2007 ,2006-11      Towards a Film Theory from Below Jiri Anger,2024-05-30

Operating between film theory media philosophy archival practice and audiovisual research Jiri Anger focuses on the relationship between figuration and materiality in early films experimental found footage cinema and video essays Would it be possible to do film theory from below through the perspective of moving image objects of their multifarious details and facets however marginal unintentional or aleatory they might be Could we treat scratches stains and shakes in archival footage as speculatively and aesthetically generative features Do these material actors have the capacity to create weird shapes within the figurative image that decenter distort and transform the existing conceptual and methodological frameworks Building on his theoretical as well as practical experience with the recently digitized corpus of the first Czech films created by Jan Kr eneck between 1898 and 1911 the author demonstrates how technological defects and accidents in archival films shape their aesthetic function and our understanding of the materiality of film in the digital age The specific clashes between the figurative and material spheres are understood through the concept of a crack up This term developed by Francis Scott Fitzgerald and theoretically reimaged by Gilles Deleuze allows us to capture the convoluted relationship between figuration and materiality as inherent to the medium of film containing negativity and productivity difference and simultaneity contingency and fate at the same time even within the tiniest cinematic units      The Voynich Manuscript as an Example of Oligo-Agglutinative Pasigraphy, Vol. II: The Semantic Classification System Steve Bolton, Class III problems are considered practically unsolvable in cryptology but none has resisted cryptanalytic attack as persistently as the Voynich Manuscript In the second installment of this 4 volume set we present the semantic classification system that preceded the first complete but approximate translation of the entire manuscript This contrasts with the piecemeal approach of all prior solutions that resulted in wildly diverent translations of minuscule selections of the text This systemic attack on the entirety of the text and its unusual distributional features such as extreme platykurtia which forbid translation into any natural language resulted first in superior transcription stability and an equally stable symbol set based on intensive statistical analysis The encoding scheme employs a 20 22 letter alphabetic script that most closely resembles a slot and filler top down a priori pasigraphic system with oligo agglutinative features that are currently only considered a theoretical possibility in the linguistics field The intricate affixing system is based mainly on precise placement of single letters to denote case roles semantic classes and 3 primary parts of speech exhibiting a strong noun surfeit At the phrase level we find dominant SOV order and head final dependent marked grammar compatible with heavily formatted inline pharmaceutical lists these result in short ranges of actionable information which no competing solution can claim Plant descriptions are demoted in comparison to other herbals in favor of processing and dispensing details This approximate solution is based on fuzzy set analysis techniques integrated with linguistic universals a wide range of common statistics Pareto and Sukhotin scores Zipf

slopes Indexes of Coincidence Agglutination and Synthesis and dozens of others and many home brewed fuzzy algorithms implemented in T SQL and VB Net after the inadequacy of many advanced data mining techniques was demonstrated Our methodology was validated when the project reached an inflection point beyond which we were able to predict the identities and properties of plants based on the text alone The project ended with plausible identification candidates for 121 of 126 herbal section plants and 7 others elsewhere in the manuscript far beyond that of other published solutions An incredible 100% of the 133 identified plants have dermatological uses These can be divided into prominent subtopics like treatment of bites anthelmintics rheumatism and other musculo skeletal ailments inflammatory skin disorders external and possibly menstrual bleeding excision of blemishes application of cosmetics and cures dispensable in baths The centerpiece of the manuscript is the Rosette Folio which depicts the grand design of a medieval bathhouse keyed to specific astrological timings also defined by satellite diagrams following a precedence hierarchy Each of these uses exhibit telltale polygraph correlations that fall into a handful of semantic hierarchies constructed from highly similar bases such as skin color based diagnostic criteria remedies solutions problems diseases plant parts and the like These findings require 2 volumes to demonstrate and another volume of data and other supplementary material Despite this complexity they culminate in a drastic simplification of the script and the first ever comprehensive translation of the Voynich Manuscript in Volume IV albeit at low resolution The first installment dedicated to linguistic analysis of the affixing system will be published concurrently with Vol II at which time the reference material in Vol III Dictionary Figures Tables and Other Supplementary Material will be made publicly available for free at the GitHub address <https://github.com/InfinidataLLC/Infinidata-Voynich-Manuscript-Project> Billboard, 2005-04-16 In its 114th year Billboard remains the world's premier weekly music publication and a diverse digital events brand content and data licensing platform Billboard publishes the most trusted charts and offers unrivaled reporting about the latest music video gaming media digital and mobile entertainment issues and trends
