The Digital Incunabula: rock • paper • pixels Patrick Aievoli, 2015-10-28 The Digital Incunabula is Patrick Aievoli's personal sonnet through media interaction and communication design. He carefully crafts each evolutionary step into ripples that are supported by his own storied professional and academic experiences. It's full of facts, terms, and historical information which makes it perfect for anyone looking to flat out learn. James Pannafino, Professor, Millersville University, Interaction Design. Well documented, well written, and well argued. Dr. Michael Soupios, Professor, Political Science, LIU Post. People who can use this book include any educators, counselors, parents, or students who are looking for information concerning design or media as a future entertainment, education, or the arts.

A Biography of the Pixel Alvy Ray Smith, 2021-08-03 The pixel as the organizing principle of all pictures from cave paintings to Toy Story. The Great Digital Convergence of all media types into one universal digital medium occurred with little fanfare at the recent turn of the millennium. The bit became the universal medium and the pixel, a particular packaging of bits, conquered the world. Henceforward, nearly every picture in the world would be composed of pixels: cell phone pictures, app interfaces, Mars Rover transmissions, book illustrations, videogames. In *A Biography of the Pixel*, Pixar cofounder Alvy Ray Smith argues that the pixel is the organizing principle of most modern media and he presents a few simple but profound ideas that unify the dazzling varieties of digital image making. Smith's story of the pixel's development begins with Fourier waves, proceeds through Turing machines, and ends with the first digital movies from Pixar, DreamWorks, and Blue Sky. Today, almost all the pictures we encounter are digital, mediated by the pixel, and irretrievably separated from their media museums and kindergartens are two of the last outposts of the analog. Smith explains engagingly and accessibly how pictures composed of invisible stuff become visible: that is, how digital pixels convert to analog display elements. Taking the special case of digital movies to represent all of Digital Light, his term for pictures constructed of pixels, and drawing on his decades of work in the field, Smith approaches his subject from multiple angles: art, technology, entertainment, business, and history. *A Biography of the Pixel* is essential reading for anyone who has watched a video on a cell phone, played a videogame, or seen a movie. 400 pages of annotations prepared by the author and available online provide an invaluable resource for readers.

From Grain to Pixel Giovanna Fossati, 2025-10-01 In *From Grain to Pixel*, Giovanna Fossati analyzes the transition from analog to digital film and its profound effects on filmmaking and film archiving. Reflecting on the theoretical conceptualization of the medium itself, Fossati poses significant questions about the status of physical film and the practice of its archival preservation, restoration, and presentation. *From Grain to Pixel* attempts to bridge the fields of film archiving and academic research by addressing the discourse on film's ontology and analyzing how different interpretations of what film is affect the role and practices of film archives. By proposing a novel theorization of film archival practice, Fossati aims to stimulate a renewed dialogue between film scholars and film archivists. Almost a decade after its first publication, this revised edition covers the latest developments in the field. Besides a new general introduction, a

new conclusion and extensive updates to each chapter a novel theoretical framework and an additional case study have been included **Focus On: 100 Most Popular 2010s Comedy-drama Films** Wikipedia contributors, Rock • Paper • Pixels Patrick Aievoli,2025-01-20 The purpose of this book is to avail faculty and students of the many different innovations events effects and back stories equated with the advent of this new era of communications and its impact on our world At our core we are a species that needs to communicate and to find a way to properly represent those messages Since the beginning of recorded history mankind has always attempted to communicate and to keep track of its endeavors and accomplishments Now by using interaction design and modern digital media it has become possible to present our story through many current and evocative platforms As each generation comes of age this new method is being utilized in all areas of their communication choices These new generations desire their communication at a different rate than its predecessors They want their information Internet ready and interactive They are involved in the immediate and that choice is not going away Interactive media is here to stay and has new rules and new effects It is changing our economies our societies and especially us as individuals The main goal of this book is to help you see how it started where it is going and how to be on the right side of this transformation How to take your first steps in that new direction and how to understand the effects of this new form of communication while being aware of its abilities and its dangers As a friend once said no matter how thin you slice it there are always two sides **ICPMG2014 - Physical Modelling in Geotechnics** Christophe Gaudin,David White,2019-01-08 The 8th International Conference on Physical Modelling in Geotechnics ICPMG2014 was organised by the Centre for Offshore Foundation Systems at the University of Western Australia under the auspices of the Technical Committee 104 for Physical Modelling in Geotechnics of the International Society of Soil Mechanics and Geotechnical Engineering This quadrennial conference is the traditional focal point for the physical modelling community of academics scientists and engineers to present and exchange the latest developments on a wide range of physical modelling aspects associated with geotechnical engineering These proceedings together with the seven previous proceedings dating from 1988 present an inestimable collection of the technical and scientific developments and breakthroughs established over the last 25 years These proceedings include 10 keynote lectures from scientific leaders within the physical modelling community and 160 peer reviewed papers from 26 countries They are organised in 14 themes presenting the latest developments in physical modelling technology modelling techniques and sensors through a wide range of soil structure interaction problems including shallow and deep foundations offshore geotechnics dams and embankments excavations and retaining structures and slope stability Fundamental aspects of earthquake engineering geohazards ground reinforcements and improvements and soil properties and behaviour are also covered demonstrating the increasing complexity of modelling arising from state of the art technological developments and increased understanding of similitude principles A special theme on education presents the latest developments in the use of physical modelling techniques for instructing undergraduate and postgraduate students in
