The FMRC Rice Transplanter Dieter Lippmann,1989 *Manually Operated Rice Transplanter for Sri Ganapathi*
Durairaj,Surendra Kumar,2013 Manual transplanting operation is a tedious operation which is normally performed by women labourers in upright bending posture It is a time consuming operation requiring about 250 300 man h ha⁻¹ accounting for about 25 per cent of total labour requirement of paddy crop To obviate problems of labour scarcity for manual transplanting during peak seasons and for accomplishing the timelines of operation transplanting should be done either by manual transplanter or self propelled transplanter In Asia more than 60 per cent farmers have land holding size less than 2 ha Therefore technology for small holding size plays a very important role in developing countries so an attempt was made to develop plug type rice transplanter for SRI International Rice Research Notes Vol 13 No 2 , Rice Science B.
Chandrasekaran,K. Annadurai,R. Kavimani,2013-07-01 This book is aimed at providing a comprehensive text on rice cultivation production with major emphasis on rice based integrated farming system models organic farming aspects alternate cropping new techniques like SRI role of biotechnology etc in an easily understandable manner This book will also help to enrich the knowledge of young researchers in various fields of agriculture and in particular agronomy as well as to the teachers and researchers of the Agricultural Universities Research Organisations **Small Farm Equipment for Developing Countries** ,1986 The role of small farm equipment Land preparation Irrigation Seeding and planting Plant protection and soil fertility Harvesting Threshing Grain drying Improving research and development manufacturing marketing extension and use of small farm equipment Empowering women farmers ?Justice, S., Flores Rojas, M., Basnyat, M.,2022-03-10 Rural women across the world work along agri food value chains performing numerous agricultural operations Their work is increasingly affected by land degradation climate change impacts and out migration It is often unrecognized unqualified and unpaid Moreover the traditional division of labor often relegates women to manual time consuming operations with high degrees of drudgery The combination of family responsibilities and insufficient access to critical services information and technologies affects women s work burden and their potential for income generation For example fewer rights over land make it more difficult for women to access subsidies finance or mechanization There are three ways in which sustainable mechanization can empower women and respond to their needs as customers of mechanization service providers reducing their drudgery and freeing up time for resting or opting for other social or economic activities as operators of machinery and equipment or staff of a mechanization hiring services business offering their service to others to earn an income as entrepreneurs managing their own mechanization hiring services agribusiness providing a service for other farmers and generating revenue The goal of this catalogue is to promote and support women s access to sustainable agricultural mechanization as operators and or managers It lists and provides information on market tested machinery and equipment for crop production and post harvest operations This catalogue highlights the potential for

smallholder farmers including women to earn an income via mechanization hire service The information for each machine or equipment includes its function its main features what it is suitable for its technical specifications key features only where to buy its pictures The target audience includes extensionists gender experts agricultural engineers government officials donors micro finance institutions and implementing partners seeking to promote inclusive agricultural mechanization interventions reduce women s drudgery and improve the efficiency of tasks they perform address gender issues in agriculture support economic opportunities for women as entrepreneurs

1 INTRODUCTION Turning is a machining procedure used to get the ideal element of round metal The primary objective in present mechanical period is to create minimal effort quality item with required measurements in an optimum time Therefore the optimum cutting parameters are to be perceived first In turning the metal is in rotational movement and a cutting tool is utilized to shear away the undesired metals This procedure requires lathe machine or turning machine cutting tool work piece and fixture The work piece is fixed in the machine chuck and is pivoted at rapid The cutting tool is taken care of in corresponding to the hub of turn During this machining procedure the cutting parameters profoundly relies on the work piece cutting tool material and so on These are dictated by understanding or machine catalogue Surface roughness Tool life and machining time is a widely used attribute of product quality and in most cases a technical necessity for mechanical products Thus the optimum selection of cutting parameters such as feed rate depth of cut cutting speed etc generates optimum conditions during machining and becomes the main exigency of manufacturing industry Surface roughness Tool life and machining time is an important criterion to find the quality of a surface It is an important response parameter In machining process various parameters are Input Parameters Cutting speed Feed rate Depth of cut Insert radius Cutting fluid
