

A script is executed, `obdbuild.sh`, that will parse the command line arguments and read the runtime libraries. After the check on the syntax the project file of `ant`, `build.xml`, is called via `java` and `Ant` runtime libraries with the supplied arguments. The `ant` project file will execute the specific task. The web interface, based on a Perl script, will collect the arguments from the HTTP request and transform those into a command line argument. So the Perl script calls the `obdbuild.sh` script.

The shell script is used to verify the syntax of the command line parameters. It should provide initial feedback if the syntax is not correct. It should also provide help information on the usage of the tool. Initially the tool is written for Unix like operating system using the Bourne shell. The following functions should be executed in the shell script:

- a Read environment settings to execute Java and ANT
- b Shows help information
- c Show the version of CMake

Congress. Senate. Committee on Appropriations. Subcommittee on Commerce, Justice, State, the Judiciary, and Related Agencies, 2006. **FM'99 - Formal Methods** Jeannette M. Wing, Jim Woodcock, Jim Davies, 1999-09-13. Formal methods are coming of age. Mathematical techniques and tools are now regarded as an important part of the development process in a wide range of industrial and governmental organisations. A transfer of technology into the mainstream of systems development is slowly but surely taking place. FM'99, the First World Congress on Formal Methods in the Development of Computing Systems, is a result and a measure of this new-found maturity. It brings an impressive array of industrial and applications-oriented papers that show how formal methods have been used to tackle real problems. These proceedings are a record of the technical symposium of FM'99, alongside the papers describing applications of formal methods, you will find technical reports, papers, and abstracts detailing new advances in formal techniques from mathematical foundations to practical tools. The World Congress is the successor to the four Formal Methods Europe Symposia which in turn succeeded the four VDM Europe Symposia. This session reflects an increasing openness within the international community of researchers and practitioners; papers were submitted covering a wide variety of formal methods and application areas. The programme committee reflects the Congress's international nature with a membership of 84 leading researchers from 38 different countries. The committee was divided into 19 tracks, each with its own chair to oversee the reviewing process. Our collective task was a difficult one: there were 259 high-quality submissions from 35 different countries. *Product Focused Software Process Improvement* Frank Bomarius, Seija Komi-Sirviö, 2003-06-30. Object Oriented Modeling And Design With UML Ajit Singh, 2019-05-16 The Unified Modeling Language UML is inherently object oriented modeling language and was designed for use in object oriented software applications The applications could be based on the object oriented technologies recommended by the Object Management Group OMG which owns the UML The initial versions of UML UML 1.x were based on three leading object oriented methods Booch OMT and OOSE to represent the culmination of best practices in practical object oriented modeling UML 2.x is still object oriented in its core though there were some apparently unsuccessful attempts to extend UML to support other development methods This book provides practical guidance on the modeling and design of object oriented systems Its specific goals are the following To provide a sound understanding of the fundamental concepts and historical evolution of the object model To facilitate a mastery of the notation and process of object oriented modelling and design To teach the realistic application of object oriented modelling and design within a variety of problem domains The concepts presented all stand on a solid theoretical foundation but this is primarily a pragmatic book that addresses the practical needs and concerns of software engineering practitioners from the

architect to the software developer
