IBM Hyper Protect Platform: Applying Data Protection and Confidentiality in a Hybrid Cloud Environment Bill White,Robbie Avill,Sandeep Batta,Abhiram Kulkarni,Timo Kußmaul,Stefan Liesche,Nicolas Mäding,Christoph Schlameuß,Peter Szmrecsányi,IBM Redbooks,2024-02-23 Protecting workloads and sensitive data throughout their lifecycle is a great concern across all industries and organizations Increasing demands to accelerate hybrid cloud adoption and integration are changing the way data is securely stored processed and accessed In addition regulatory guidelines and standards are causing many businesses and organizations to implement zero trust policies and privacy enhancing techniques to restrict access to workloads as state of least privilege is established A state of least privilege ensures that no user or workload has any more access to data than is necessary Confidentiality and integrity assurance for

data at rest and data in transit is typically provided through cryptography Nevertheless data in use is generally unencrypted while it is processed by the system which can make data in use accessible to privileged users or workloads In the past data owners relied upon operational assurance to control access to workloads and data An operational assurance approach ensures that a service provider will not access customer workloads or data through specific operational procedures and measures However with today s constant unpredictable and always changing cyberthreats operational assurance is not enough A more robust technical assurance approach that is hardware based is needed A Trusted Execution Environment TEE or confidential computing platform does just that A TEE ensures that no one can access sensitive workloads and data while in use not even the service provider A TEE can also protect the CI CD pipeline from bad actors enforce supply chain protection and provide code integrity through cryptographic proofs and encryption This IBM Redbooks publication outlines how to apply common concepts of data protection and confidentiality and make use of a privacy enhancing technology based solution that can be implemented in a hybrid cloud environment It describes the TEE technologies that are offered with IBM Z and IBM LinuxONE such as IBM Secure Execution for Linux and how the IBM Hyper Protect Platform uses them This publication discusses how the various IBM Hyper Protect services ensure zero trust data centric security and data privacy end to end It also illustrates the business value through specific use case scenarios covering relevant aspects of workload creation and evidence collection for regulatory compliance of software supply chains This IBM Redbooks publication is for Chief Information Security Officers CISOs IT managers security architects security administrators cloud application developers and anyone who needs to plan deploy and manage data security and confidentiality in a hybrid cloud environment The reader is expected to have a basic understanding of IT security and hybrid cloud concepts
