Lichtenstein,2014-06-20 How do organizations become created Entrepreneurship scholars have debated this question for decades but only recently have they been able to gain insights into the non linear dynamics that lead to organizational emergence through the use of the complexity sciences Written for social science researchers Generative Emergence summarizes these literatures including the first comprehensive review of each of the 15 complexity science disciplines In doing so the book makes a bold proposal for a discipline of Emergence and explores one of its proposed fields namely Generative Emergence The book begins with a detailed summary of its underlying science dissipative structures theory and rigorously maps the processes of order creation discovered by that science to identify a 5 phase model of order creation in entrepreneurial ventures The second half of the book presents the findings from an experimental study that tested the model in four fast growth ventures through a year long week by week longitudinal analysis of their processes based on over 750 interviews and 1000 hours of on site observation These data combined with reports from over a dozen other studies confirm the dynamics of the 5 phase model in multiple contexts By way of conclusion the book explores how the model of Generative Emergence could be applied to enact emergence within and across organizations **Outlaw Territories** Felicity D.

Scott,2016-05-20 Outlaw Territories Environments of Insecurity Architectures of Counterinsurgency traces the relations of architecture and urbanism to forms of human unsettlement and territorial insecurity during the 1960s and 70s Investigating a set of responses to the growing urban unrest in the developed and developing worlds Outlaw Territories revisits an era when the discipline of architecture staked out a role in global environmental governance and the biopolitical management of populations Felicity D Scott demonstrates how architecture engaged the displacement of persons brought on by migration urbanization environmental catastrophe and warfare and at the same time how it responded to the material environmental psychological and geopolitical transformations brought on by postindustrial technologies and neoliberal capitalism after World War II At the height of the US led war in Vietnam and Cambodia and ongoing decolonization struggles in many parts of the world architecture not only emerged as a target of political agitation on account of its inherent normativity but also became heavily imbricated within military legal and humanitarian apparatuses and scientific and technological research dedicated to questions of international management and security Once architecture became aligned with a global matrix of forces concerned with the environment economic development migration genocide and war its conventional role did not remain unchallenged but shifted at times toward providing strategic expertise for institutions responding to transformations

born of neoliberal capitalism Outlaw Territories interrogates this nexus and questions how and to what ends architecture and the environment came to be intimately connected to the expanded exercise of power within shifting geopolitical frameworks of this time Rockefeller Jacob Nordangård,2024-04-02 Why would the first family of oil so ardently support environmental climate research and activism Join author and researcher Jacob Nordang rd as he uncovers the whole sordid truth The Rockefeller family is one of the richest in the world Yet why would the family that made the world dependent on oil fund environmental and climate research since the 1950s help shape climate policy measures since the 1980s and supported climate activism since the 1990s Rockefeller Controlling the Game is the thrilling and paradoxical story of one of the world s most influential global players Through its top position in American business close contacts with the White House and with their immense financial power as one of the world s leading private research funders the Rockefellers have been able to anchor the climate issue both scientifically and politically Yet what is the reasoning behind doing so Author and researcher Jacob Nordang rd follows the family from the founding of Standard Oil and the Rockefeller Foundation up through the aftermath of the Paris Agreement with the declaration of the Fourth Industrial Revolution in January 2016 to the present day Nordang rd s in depth research includes the large quantities of new material recently made available on the Internet as well as the Rockefeller Foundation s own annual reports Nordang rd s main focus is the Rockefeller family s involvement in climate research and politics but the actions and motives of some of their allies are also explored as well as the family s influence on the development of modern medicine family planning agriculture art architecture behavioral science information technology and politics The Rockefeller family s utopian dream of a perfect world will have serious consequences for the survival of the human species and life as we know it The Rockefeller Foundation s stated mission to promote the well being of humanity throughout the world has a dark flipside as Nordang rd will prove the Rockefeller family s long standing battle against climate change contains elements of sophisticated propaganda techniques futurism and New Age philosophy aiming at a complete transformation of the whole earth system including economy ecology culture and even humanity itself

Enviromedics Jay Lemery,Paul Auerbach,2017-10-20 Many of us have concerns about the effects of climate change on Earth but we often overlook the essential issue of human health This book addresses that oversight and enlightens readers about the most important aspect of one of the greatest challenges of our time The global environment is under massive stress from centuries of human industrialization The projections regarding climate change for the next century and beyond are grim The impact this will have on human health is tremendous and we are only just now discovering what the long term outcomes may be By weighing in from a physician s perspective Jay Lemery and Paul Auerbach clarify the science dispel the myths and help readers understand the threats of climate change to human health No better argument exists for persuading people to care about climate change than a close look at its impacts on our physical and emotional well being The need has never been greater for a grounded informative and accessible discussion about this topic In this groundbreaking book the authors not

only sound the alarm but address the health issues likely to arise in the coming years

The Rise of Awards in

Architecture Jean-Pierre Chupin, Carmela Cucuzzella, Georges Adamczyk, 2022-09-06 This book is the first scientific study to focus on awards in architecture and the built environment investigating their exponential growth since the 1980s The celebration of excellence in architecture and related fields remains a phenomenon on which there is strangely little scientific scrutiny What is to be understood from the plethora of award winning projects award winning buildings and awarded professional practices in the built environment year after year Glossy images partake in an intense ballet at every local regional national or international award ceremony and they are meant to embody proofs of architectural excellence However it is necessary to take a critical distance to question what awards are meant to embody symbolize and perhaps measure Each of the 10 chapters in this volume is centered on one question related to themes as varied as the comparison of Pritzker and Nobel Prizes the Prix de Rome the redefinition of quality through awards green awards and sustainability the multiplication of sustainable awards heritage awards architecture book awards the awarding of school architecture awards as mediations and awards as pedagogical devices Many fields once consolidated have featured a sharp increase in related prizes The original data compiled and summarized in 4 appendices cover more than 150 award granting organizations in some 30 countries Our inventory includes upwards of 24 000 prizes awarded at more than 3 100 events the earliest of which is the first instance of Western architecture's seminal Grand Prix de Rome in France in 1720 A history of contemporary architecture is thus written through press releases that praise the merits of the heroes as much as their works and achievements And while awards can be vehicles that propel architecture forward they can also be Trojan horses in an era that is constantly on the lookout for event driven products small and big news and brand imaging

Addressing Modernity

Hannes Bergthaller, Carsten Schinko, 2011 Niklas Luhmann's theory of social systems is one of the most ambitious attempts to create a coherent account of global modernity Primarily interested in the fundamental structures of modern society however Luhmann himself paid relatively little attention to regional variations The aim of this book is to seek out modernity in one particular location The United States of America Gathering essays from a group of cultural and literary scholars sociologists and philosophers Addressing Modernity reassesses the claims of American exceptionalism by setting them in the context of Luhmann's conception of modernity and explores how social systems theory can generate new perspectives on what has often been described as the first thoroughly modern nation As a study of American society and culture from a Luhmannian vantage point the book is of interest to scholars from both American Studies and social systems theory in general

The Unconstructable Earth Frédéric Neyrat, 2018-10-16 Winner Grand Prize French Voices Award for Excellence in Publication and Translation The Space Age is over Not at all A new planet has appeared Earth In the age of the Anthropocene the Earth is a post natural planet that can be remade at will controlled and managed thanks to the prowess of geoengineering This new imaginary is also accompanied by a new kind of power geopower that takes the entire Earth in its social biological and geophysical dimensions as an object of knowledge intervention and governmentality In short our rising awareness that we have destroyed our planet has simultaneously provided us not with remorse or resolve but with a new fantasy that the Anthropocene delivers an opportunity to remake our terrestrial environment thanks to the power of technology Such is the position we find ourselves in when proposals for reengineering the earth's ecosystems and geosystems are taken as the only politically feasible answer to ecological catastrophe Yet far from being merely the fruit of geo capitalism this new grand narrative of geopower has also

been activated by theorists of the constructivist turn ecomodernist postenvironmentalist accelerationist who have likewise called into question the great divide between nature and culture With the collapse of this divide a cyborg hybrid flexible nature has been built an impoverished nature that does not exist without being performed by technologies that proliferate within the space of human needs and capitalist imperatives Underneath this performative vision resides a hidden anaturalism denying all otherness to nature and the Earth no longer by externalizing it as a thing to be dominated but by radically internalizing it as something to be digested Constructivist ecology thus finds itself in no position to confront the geoconstructivist project with its claim that there is no nature and its aim to replace Earth with Earth 2 0 Against both positions Neyrat stakes out the importance of the unconstructable Earth Against the fusional myth of technology over nature but without returning to the division between nature and culture he proposes an ecology of separation that acknowledges the wild subtractive capacity of nature Against the capitalist technocratic delusion of earth as a constructible object but equally against an organicism marked by unacknowledged traces of racism and sexism Neyrat shows what it means to appreciate Earth as an unsubstitutable becoming a trajectory that cannot be replicated in a laboratory Underway for billions of years withdrawing into the most distant past and the most inaccessible future Earth escapes the hubris of all who would remake and master it This remarkable book which will be of interest to those across the humanities natural sciences and social sciences from theorists to shapers of policy recasts the earth as a singular trajectory that invites humans to turn political ecology into a geopolitics
