Permanova Primer Manual

Theodore Endreny

Permanova Primer Manual:

Whales and climate Jan-Olaf Meynecke, Hector M. Guzman, Eduardo Secchi, Solène Derville, Russell Richards, 2024-01-03

A Systems Approach for River and River Basin Restoration Theodore Endreny, 2021-05-27 Communities increasingly find that the water quality water levels or some other resource indicator in their river basins do not meet their expectations This discrepancy between the desired and actual state of the resource leads to efforts in river basin restoration River basins are complex systems and too often restoration efforts are ineffective due to a lack of understanding of the purpose of the system defined by the system structure and function The river basin structure includes stocks e g water level or quality inflows e g precipitation or fertilization outflows e g evaporation or runoff and positive and negative feedback loops with delays in responsiveness all of which function to change or stabilize the state of the system e g the stock of interest such as water level or quality External drivers on this structure together with goals and rules contribute to how a river basin functions This book reviews several new research projects to identify and rank the twelve most effective leverage points to address discrepancies between the desired and actual state of the river basin system This book demonstrates that river basin restoration is most likely to succeed when we change paradigms rather than try to change the system elements as the paradigm will establish the system goals structure rules delays and parameters Coral Reef Resilience Loke Ming Chou, Danwei Huang, 2021-06-02

Are coral reefs sufficiently resilient to withstand the changing environmental conditions of the future Research is necessary to gain a better understanding of how reefs will respond and how resilient they are Various approaches to characterize and analyze reef responses from the molecular to community and habitat levels are all essential Trends could be analyzed from spatially extensive and or long term monitoring data and applied to novel management strategies Reef resilience research continues to remain relevant and important to the future of coral reefs The contributions in this volume provide a further dimension to the understanding of reef resilience *5th International Marine Conservation Congress* E. Ecosystem Goods and Services in Agricultural Systems Maria A. Tsiafouli, Evangelia G. Drakou, Alberto Orgiazzi, Katarina Hedlund, Karl Ritz, 2017-10-18 Agricultural land is subjected to a variety of societal pressures as demands for food animal feed and biomass production increase with an added requirement to simultaneously maintain natural areas and mitigate climatic and environmental impacts The biotic elements of agricultural systems interact with the abiotic environment to generate a number of ecosystem functions that offer services benefiting humans across many scales of time and space The intensification of agriculture generally reduces biodiversity including that within soil and impacts negatively upon a number of regulating and supporting ecosystem services There is a global need toward achieving sustainable agricultural systems as also highlighted in the United Nations Sustainable Development Goals There is hence a need for management regimes that enhance both agricultural production and the associated provision of multiple ecosystem services The articles of this Research Topic enhance our knowledge of how management practices applied to agricultural systems affect the delivery of

multiple ecosystem services and how trade offs between provisioning regulating and supporting services can be handled both above and below ground They also show the diversity of topics that need to be considered within the framework of ecosystem services delivered by agricultural systems from knowledge on basic concepts and newly proposed frameworks to a focus on specific ecosystem types such as grasslands and high nature value farmlands pollinator habitats and soil habitats This diversity of topics indicates the need for broader scope research integrated with targeted scientific research to promote sustainable agricultural practices and to ensure food security

The Philippine Seas: Biodiversity and Ecological Impacts of Natural and Anthropogenic stressors in Tropical Reef Systems Michael Yu Roleda, Yehuda Benayahu, 2024-04-18

The Philippines is located in a region called the Coral Triangle an area of exceptional importance as it is recognized as the global center for marine biodiversity Within this region the Philippines is also known as the center of this center The marine resources are made up of coral reefs seagrass beds seaweeds invertebrates fisheries and many others Unfortunately the Philippines is facing challenges to conserve its marine biodiversity due to overfishing destructive fishing practices and mariculture derived eutrophication and coastal acidification among others These human activities coupled with climate change pose serious threats and possible decimation of its marine biodiversity
