

An abstract landscape painting. The upper two-thirds of the image are dominated by various shades of green, ranging from a vibrant lime green to a deep, dark forest green. The brushstrokes are visible, giving it a textured, painterly appearance. A dark, almost black, horizontal band separates the green from the bottom section. The bottom third of the image is a solid, deep red or maroon color, also with a visible texture. The overall effect is a dramatic, high-contrast natural scene.

Plants A Very Short Introduction:

Plants Timothy Walker, 2012-04-26 Plants form a fundamental element of the biosphere and the evolution of plants has directly affected the evolution of animal life and the evolution of the Earth's climate. Plants have also become essential to humans not only in the form of cereal crops, fruit and vegetables but in their many other uses in wood and paper and in providing medicines. Their aesthetic importance too in our parks and gardens as well as in wildflower meadows and great forests should not be underestimated. In this Very Short Introduction Timothy Walker, Director of the Botanical Gardens in Oxford, provides a concise account of the nature of plants, their variety, their evolution and their importance and uses stressing the need and efforts for their conservation for future generations.

ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly.
