Viewpoints in Teaching and Learning, 1981 **Combinatorial Methods** Vladimir Shpilrain, Alexander Mikhalev, Jie-tai Yu, 2012-11-12 This book is about three seemingly independent areas of mathematics combinatorial group theory the theory of Lie algebras and affine algebraic geometry Indeed for many years these areas were being developed fairly independently Combinatorial group theory the oldest of the three was born in the beginning of the 20th century as a branch of low dimensional topology Very soon it became an important area of mathematics with its own powerful techniques In the 1950s combinatorial group theory started to influence rather substantially the theory of Lie algebras thus combinatorial theory of Lie algebras was shaped although the origins of the theory can be traced back to the 1930s In the 1960s B Buchberger introduced what is now known as Gröbner bases This marked the beginning of a new combinatorial era in commutative algebra It is not very likely that Buchberger was directly influenced by ideas from combinatorial group theory but his famous algorithm bears resemblance to Nielsen's method although in a more sophisticated form **Algebra: Themes, Tools, Concepts -- Teachers' Edition** Henri Picciotto, Anita Wah, 1994 *Computation and Automata* Arto Salomaa, 1985-05-23 In this book which was originally published in 1985 Arto Salomaa gives an introduction to certain mathematical topics central to theoretical computer science computability and recursive functions formal languages and automata computational complexity and cryptography **Most Likely to Succeed** Tony Wagner, Ted Dintersmith, 2015-08-18 The basis for a major documentary two leading experts sound an urgent call for the radical reimagining of American education so we can equip students for the realities of the twenty first century economy If you read one book about education this decade make it this one Adam Braun bestselling author and founder of Pencils of Promise Today more than ever we prize academic achievement pressuring our children to get into the right colleges have the highest GPAs and pursue advanced degrees But while students may graduate with credentials by and large they lack the competencies needed to be thoughtful engaged citizens and to get good jobs in our rapidly evolving economy Our school system was engineered a century ago to produce a workforce for a world that no longer exists Alarminglly our methods of schooling crush the creativity and initiative young people really need to thrive in the twenty first century Now bestselling author and education expert Tony Wagner and venture capitalist Ted Dintersmith call for a complete overhaul of the function and focus of American schools sharing insights and stories from the front lines including profiles of successful students teachers parents and business leaders Their powerful urgent message identifies the growing gap between credentials and competence and offers a framework for change Most Likely to Succeed presents a new vision of American education one that puts wonder creativity and initiative at the very heart of the learning process and prepares students for today's economy In this excellent book Wagner and Dintersmith argue that success and happiness will depend increasingly on having the ability to innovate Chicago Tribune and this crucial guide offers policymakers and opinion leaders a roadmap for getting the best for

Foundations for the Next-Generation Electric Grid National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Board on Mathematical Sciences and Their Applications, Committee on Analytical Research Foundations for the Next-Generation Electric Grid, 2016-04-15 Electricity is the lifeblood of modern society and for the vast majority of people that electricity is obtained from large interconnected power grids However the grid that was developed in the 20th century and the incremental improvements made since then including its underlying analytic foundations is no longer adequate to completely meet the needs of the 21st century The next generation electric grid must be more flexible and resilient While fossil fuels will have their place for decades to come the grid of the future will need to accommodate a wider mix of more intermittent generating sources such as wind and distributed solar photovoltaics Achieving this grid of the future will require effort on several fronts There is a need for continued shorter term engineering research and development building on the existing analytic foundations for the grid But there is also a need for more fundamental research to expand these analytic foundations Analytic Research Foundations for the Next Generation Electric Grid provide guidance on the longer term critical areas for research in mathematical and computational sciences that is needed for the next generation grid It offers recommendations that are designed to help direct future research as the grid evolves and to give the nation s research and development infrastructure the tools it needs to effectively develop test and use this research *Commutative Algebra through Exercises* Andrea Bandini, Patrizia Gianni, Enrico Sbarra, 2024-07-12 This book provides a first introduction to the fundamental concepts of commutative algebra What sets it apart from other

textbooks is the extensive collection of 400 solved exercises providing readers with the opportunity to apply theoretical knowledge to practical problem solving fostering a deeper and more thorough understanding of the subject The topics presented here are not commonly found in a single text Consequently the first part presents definitions properties and results crucial for understanding and solving the exercises serving also as a valuable reference The second part contains the exercises and a section titled with True or False questions which serves as a valid self assessment test Considerable effort has been invested in crafting solutions that provide the essential details aiming for a well balanced presentation We intend to guide students systematically through the challenging process of writing mathematical proofs with formal correctness and clarity Our approach is constructive aiming to illustrate concepts by applying them to the analysis of multivariate polynomial rings and modules over a principal ideal domain PID whenever feasible Algorithms for computing these objects facilitate the generation of diverse examples In particular the structure of finitely generated modules over a PID is analyzed using the Smith canonical form of matrices Furthermore various properties of polynomial rings are investigated through the application of Buchberger s Algorithm for computing Gr bner bases This book is intended for advanced undergraduates or master s students assuming only basic knowledge of finite fields Abelian groups and linear algebra This approach aims to inspire the curiosity of readers and encourages them to find their own proofs while providing detailed solutions to support their learning It also provides students with the necessary tools to pursue more advanced studies in commutative algebra and related subjects
