Structural Design Guide to the ACI Building Code Edward S. Hoffman, David P. Gustafson, Albert J. Gouwens, 2013-03-09

This book is intended to guide practicing structural engineers familiar with earlier ACI building codes into more profitable routine designs with the ACI 1995 Building Code ACI 318 95 Each new ACI Building Code expresses the latest knowledge of reinforced concrete in legal language for safe design application Beginning in 1956 with the introduction of ultimate strength design each new code offered better utilization of high strength reinforcement and the compressive strength of the concrete itself Each new code thus permitted more economy as to construction material but achieved it through more detailed and complicated design calculations In addition to competition requiring independent structural engineers to follow the latest code for economy it created a professional obligation to follow the latest code for accepted levels of structural safety The increasing complexity of codes has encouraged the use of computers for design and has stimulated the development of computer based handbooks Before computer software can be successfully used in the structural design of buildings preliminary sizes of structural elements must be established from handbook tables estimates or experienced first guesses for input into the computer

Reinforcement for Modern Concrete Structures Khan Mahmud Amanat, 2025-03-26

There are a lot of excellent textbooks on the design of reinforced concrete structures However based on professional experience of more than thirty years the author feels that a separate book dedicated only to discuss the properties behavior and use of reinforcement in concrete construction is highly justified Conventional textbooks on concrete structures focus primarily on the mechanics of reinforced concrete design Properties of reinforcement are discussed in a limited manner only those which are deemed just adequate for discussing the theory of concrete mechanics Typically such books contain little or no background information or explanation as to why the various code provisions or rules regarding the reinforcement are imposed or formulated It is observed that the application of modern materials and technologies in reinforcement manufacturing does not get proper attention or consideration in the engineering practices of many professionals Based on

the interaction with many engineers engaged in the design and construction of concrete structures the author feels that there is a lack of the essential background knowledge of the engineering properties and behavior of concrete reinforcement among many of them And such a lack of knowledge often leads to improper implementation of the code design provisions Limited scope of our existing engineering curricula is primarily responsible for this This book has been written with an aim to fill this gap and to make engineering students and practicing engineers more up to date Guide for Protection and Repair of Concrete Structures FIB – International Federation for Structural Concrete, 2022-03-01 The idea of preparing a technical document for the repairs and interventions upon concrete structures goes back to the former fib COM5 Structural Service Life Aspects being the goal of the then TG5 9 After a long period of reduced activity and taking into account the reorganization of fib commissions that meanwhile took place on June 2017 a different approach was proposed to push forward the task of TG8 1 formerly TG5 9 The new goal of TG 8 1 was to deliver a how to do guide gathering together protection repair and strengthening techniques for concrete structures Chapters are intended to provide both guidelines and case studies serving as support to the application of fib MC2020 pre normative specifications Each chapter was written by an editorial team comprising desirably at least a researcher a designer and a contractor Templates have been prepared in order to harmonize the contents and the presentation of the different methods Following the writing process chapters were reviewed by experts and after amendments by the authors they underwent a second review process by COM8 and TG3 4 members as well as by different practitioners For each protection repair and strengthening method addressed in this guide readers have a description of when to adopt it which materials and systems are required which techniques are available and what kind of equipment is needed It then presents a summary of stakeholders roles and qualifications design guidelines referring to most relevant codes and references the intervention procedure quality control measures and monitoring and maintenance activities Due to the extent of the guide it was decided to publish it as bulletin 102 addressing protection and repair methods and bulletin 103 addressing strengthening methods We would like to thank the authors reviewers and members of COM8 and TG3 4 for their work in developing this fib Bulletin which we hope will be useful for professionals working in the field of existing concrete structures especially those concerned with life cycle management and conservation activities As noted above this Bulletin is also intended to act as a background and supporting document to the next edition of the fib Model Code for Concrete Structures which is currently under development under the auspices of TG10 1 with the working title of fib Model Code 2020 **Drilled Shaft Design and Construction Guidelines Manual: Construction procedures and design for axial loading** Lymon C.
