

Pediatric Case Study #1

Burns, C.E., Richardson, B. & Brady, M.A. (2010). Pediatric Primary Care Case Studies. Sudbury, Massachusetts: Jones and Bartlett.

Maya Conteh is a 9 month old who comes to the clinic for an evaluation. She is accompanied by her mother who speaks Arabic and English. The mother expresses concern with Maya's development. The family emigrated from the Sudan 1 year ago and now lives in low income student housing because the father is in graduate school. This is their first child. The maternal grandparents are also temporarily living in the house and help with Maya.

Birth History: Maya was born 11 weeks early, weighing 2 lbs 8 oz. When Maya was just a few days old, she stopped breathing and was placed on a ventilator. After 24 hours she was able to breathe on her own. According to the mother, many tests were run on Maya, but the doctors could find nothing wrong. Maya spent 2 months in the hospital without incident and was discharged to home.

Mother reports: she noticed that Maya drooled a lot and choked easily with her bottle. Now she reports that Maya cannot hold her head up straight, roll or sit without support. She cries a lot and becomes stiff with rage. Mother reports no hospitalizations, surgeries or injuries since discharge.

Is Maya developing "normally?"

- No. Maya cannot hold her head up straight, roll or sit without support.

What developmental milestones would you expect a 9-month-old infant to have achieved?

- Lift head by 2 mo.
- Roll over by 4 mo.
- Roll prone to supine by 4 mo.
- Roll supine to prone by 6 mo.
- Sit independently by 8 mo.
- Crawling by 8 mo.

Rahm, 2006 Children are not simply adults They

commonly present with unique problems that are typically not encountered in older patients. These unique problems require the paramedic to alter to some degree his or her approach to the sick or injured child. Because a relatively small percentage of EMS calls involve a critically ill or injured child, it is common for the paramedic to experience anxiety when such a call is received. Pediatric Case Studies for the Paramedic contains 20 case studies representing a variety of pediatric emergencies that paramedics may encounter in the field.

Screenplay Keri Facer, 2003. This study sets out to question commonplace assumptions about the use of technology by children at home. Bringing together research from the perspectives of psychology, sociology, education, and media studies, the authors ask whether we are really witnessing the rise of a new digital generation.

Behavioral Aspects of Pediatric Burns Kenneth J. Tarnowski, 2013-06-29. In recent years, considerable professional attention has centered on the behavioral aspects of various childhood illnesses and injuries. Indeed, child health psychology has grown exponentially over the past decade. One index of this growth is found in the number of texts that have recently appeared in the area. Gross Karoly 1988, Krasnegor Arasteh Levine Carey Crocker Routh 1988, Russo Tuma 1982, Varni 1983. In general, these texts provide summaries of the psychological literature across a variety of established e.g. oncology and emerging psychoneuroimmunology areas of child health. Until recently, many books on the psychological aspects of pediatric health provided no or minimal information about the psychosocial plight of child burn victims. In some instances, pediatric burns might be mentioned parenthetically as another example of a population for which behavioral treatment procedures e.g. pain management may be of value. In part, the relative inattention devoted to this population may be related to the perception that the literature in this area is sketchy and characterized by significant methodological and substantive shortcomings. In many instances, this perception is largely justified. However, it is also the case that the pediatric burn literature has evolved considerably over the past decade, and that the incidence of and morbidity associated with severe burn injuries mandates immediate and increased attention by mental health professionals.
