Civil Liability for Damage Caused by Global Navigation Satellite System Dejian Kong, 2019-05-24 It has come to pass that national security economic growth and transportation safety not to mention such infrastructure as banking and electricity are severely dependent on the positioning information navigation capabilities and time dissemination provided by Global Navigation Satellite System GNSS However GNSS is not risk free The more humanity depends on GNSS the more risks it has to face It is irresponsible to wait for an accident to happen merely to justify the need for an appropriate GNSS civil liability regime This hugely important book examines the structure of such a regime in unprecedented depth and proposes a uniform governance structure composed of an institutional framework and a legal system for GNSS with safety of life signals at its core Exploring whether the current international law including air law and space law conventions is adequate to deal with the issue of civil liability in the context of GNSS the author confronts and responds to such crucial

issues as the following ensuring that parties suffering damage caused by GNSS get fair prompt and adequate compensation balancing the interests of the GNSS industry in order for it to maintain its sustainable development identifying legal gaps arising in the GNSS context and how we should move forward determining which parts of the value chain of GNSS may qualify as origins of damage and construing GNSS civil liability mainly from contractual product and general tort liability perspectives The author assesses various solutions for GNSS civil liability based on their feasibility including an institutional defence against the doctrine of sovereign immunity and recommendations on how several international organisations can work together in this endeavour He examines scholarships travaux pr paratoires conference documents and treaties as well as national legislation A hypothetical case where damage is caused by GNSS is elaborated illustrating each legal relationship and causal link In its committed urging of GNSS signal providers to improve the stability of the satellite navigation systems and its insightful recommendations on how to promote public safety this book offers a roadmap indicating a truly viable international regime of GNSS civil liability Relevant international organisations and States as well as practitioners are sure to respond positively to its unique and important analysis **Navigation** B. Unsettled Topics in the Application of Satellite Navigation to Air Traffic

Management James L. Farrell, 2020-05-27 Contemporary air traffic management ATM challenges are both 1 acute and 2 growing at rates far outpacing established ways for absorbing technological innovation Lack of timely response will guarantee failure to meet demands Immediately that creates a necessity to identify means of coping and judging new technologies based on possible speed of adoption Paralleling the challenges are developments in capability both recent and decades old Some steps e.g Global Positioning System GPS backup are well known and in fact should have progressed further long ago Others e.g sharing raw measurements instead of position fixes are equally well known and if followed by further flight tests initiated and successful years ago would have produced a wealth of in flight experience by now if development had continued Other possibilities e.g automated pilot override are much less common and are considered largely experimental This SAE EDGE Research Report is aimed at focusing industry attention on unsettled ATM issues and activities that appear most likely to offer solutions starting with the near term and continuing on toward increasing versatility and confidence as experience accumulates In general the more familiar developments tend to suggest quicker acceptance of test trial initiation while comparatively unexplored techniques call for a more gradual assimilation Flexibility for growth is needed in any event without the pervasive delays that have obstructed progress for so long NOTE SAE EDGE Research Reports are intended to identify and illuminate key issues in emerging but still unsettled technologies of interest to the mobility industry The goal of SAE EDGE Research Reports is to stimulate discussion and work in the hope of promoting and speeding resolution of identified issues SAE EDGE Research Reports are not intended to resolve the challenges they identify or close any topic to further scrutiny Click here to access the full SAE EDGETM Research Report portfolio <https://doi.org/10.4271/EPR2020010> [Report of NRL Progress](#) Naval Research Laboratory (U.S.), 1972-03
