Abstract. In order to improve the efficiency of innovation, the process of technology innovation has caused the attention of experts and scholars day by day. But in the process of technology innovation, the research on the extraction and classification of innovation elements needs to be further specific and systematic. Based on the full research on the innovation activities and innovation elements in many innovative fields, this paper elaborates the general process of the formation of innovation principle, and clusters innovation elements in many fields to form nine innovation dimensions, and then segments each innovation dimension into several sub dimensions of innovation. This paper aims to provide theoretical support for the research of innovative methods, and provide help for improving the quality and efficiency of innovation.

1 Introduction

With the advent of knowledge economy, innovation has become the only effective means to gain competitive advantage, while the improvement of innovation ability needs to be guided by scientific method. The role of the research on methods of technology innovation is to study the process of technology innovation, discover the law of technology innovation, and form a systematic and procedural innovation path, therefore improve the quality and efficiency of technology innovation[1, 2].

The process of technology innovation is to rearrange and optimally design the elements of innovation system, information, process and production process and so on [3]. Analyzing the process of technology innovation will help to excavate the potential law of technology innovation. The research on the process of technology innovation, especially the research on the innovation elements in the process of technology innovation, has become the focus of the attention of experts and scholars day by day. Hu J uses the method of fuzzy cognitive map to identify the causal relationship between factors and constructs an evaluation framework of technological innovation to determine the important factors that influence the path dependence [4]. In the process of technology innovation, the system object should be analyzed structured and multi levels in order to better facilitate the innovation design [5, 6]. Some experts and scholars proposed that decomposing the process of technology innovation and studying on the innovation mechanism will help to dig the potential law of technology innovation [7, 8]. Meanwhile, existing research on the elements of technology innovation is also increasingly prominent, and the principle of innovation and invention obtained from the coupling of innovative elements and innovation law has been widely recognized [9, 10].
