has allowed malicious actors to continue to operate with increased anonymity across the internet. This anonymity has enabled increased collaboration between attackers which has aided the development of new ransomware attacks and led to an increasing level of technical complexity in ransomware attacks. This book highlights that the continuous expansion and early adoption of emerging technologies may be beyond the capacity of conventional risk managers and risk management frameworks. Researchers and advanced level students studying or working in computer science, business or criminology will find this book useful as a reference or secondary text. Professionals working in cybersecurity, cryptography, information technology, financial crime and other related topics will also welcome this book as a reference.

### **Cyber Security Politics**

Myriam Dunn Cavelty, Andreas Wenger, 2022-02-15. This book examines new and challenging political aspects of cyber security and presents it as an issue defined by socio technological uncertainty and political fragmentation. Structured along two broad themes and providing empirical examples for how socio technical changes and political responses interact, the first part of the book looks at the current use of cyber space in conflictual settings while the second focuses on political responses by state and non state actors in an environment defined by uncertainties. Within this it highlights four key debates that encapsulate the complexities and paradoxes of cyber security politics from a Western perspective: how much political influence states can achieve via cyber operations and what context factors condition the limited strategic utility of such operations; the role of emerging digital technologies and how the dynamics of the tech innovation process reinforce the fragmentation of the governance space; how states attempt to uphold stability in cyberspace and more generally in their strategic relations; and how the shared responsibility of state, economy and society for cyber security continues to be re negotiated in an increasingly trans sectoral and transnational governance space. This book will be of much interest to students of cyber security, global governance, technology studies and international relations.
