Numerical Development - From cognitive functions to neural underpinnings Korbini Moeller, Elise Klein, Klaus F Willmes - von Hinckeldey, Karin Kucian, 2015-02-24 Living at the beginning of the 21st century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our numerical development in formal e g school but also informal contexts e g family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now starting to put together a more and more coherent picture of how numerical competencies develop and how this development is

associated with neural changes as well. In the end, this knowledge might also lead to a better understanding of the reasons for atypical numerical development, which often has grave consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities. Therefore, this Research Topic deals with all aspects of numerical development, findings from behavioural performance to underlying neural substrates, from cross-sectional to longitudinal evaluations from healthy to clinical populations. To this end, we included empirical contributions using different experimental methodologies but also theoretical contributions, review articles or opinion papers.

Skills for Human Development Lesley Joy Powell, Simon McGrath, 2019-03-15 Focusing on reimagining the purpose of vocational education and training, VET and grounded in the reality of a small cohort of young South Africans and an institution seeking to serve them, *Skills for Human Development* moves beyond the inadequacies of the dominant human capital orthodoxy to present a rich theoretical and practical alternative for VET. Offering a human development and capability approach, it brings social justice to the forefront of the discussion of VET's purpose at the national, institutional and individual levels. In doing so, this book insists that VET should be about enlarging people's opportunities to live a flourishing life rather than simply being about narrow employability and productivity. It argues that human development approaches, while acknowledging the importance of work in its broadest sense, offer a better way of bringing together VET and development than the current human capital inspired orthodoxy. Offering a transformative vision for skills development, this book considers the potential contribution skills development could make to broader human development as well as to economic development. Points to an alternative approach to the current and flawed deficit assumptions of VET learners. Presents for the first time an alternative evaluative frame for judging VET purpose and quality. Presents a timely account of current vocational and education training that is high on the agenda of international policymakers. Taking a broad perspective, *Skills for Human Development* presents a comprehensive and unique framework which bridges theory, policy and practice to give VET institutions a new way of thinking about their practice and VET policymakers a new way of engaging with global messages of sustainable human development. It is a vital resource for those working on the human development and skills approach in multiple disciplines and offers a grounding framework for international policymakers interested in this growing area.
