Thermal Process Modeling 2014: B. Lynn Ferguson, Robert Goldstein, Scott MacKenzie, and Rozalia Papp, 2014-06-01 Thermal processes are key manufacturing steps in producing durable and useful products with solidification welding heat treating and surface engineering being primary steps These papers represent the latest state of the art in thermal process modeling The breadth of topics covers the depth of the industry

Crop Systems Biology Xinyou Yin, Paul C. Struik, 2015-11-11 The sequencing of genomes has been completed for an increasing number of crop species and researchers have now succeeded in isolating and characterising many important QTLs genes High expectations from genomics however are waving back toward the recognition that crop physiology is also important for realistic improvement of crop productivity Complex processes and networks along various hierarchical levels of crop growth and development can be thoroughly understood with the help of their mathematical description modelling The further practical application of these understandings also requires quantitative predictions In order to better support design engineering and breeding for new crops and cultivars for improving agricultural production under global warming and climate change there is an increasing call for an interdisciplinary research approach which combines modern genetics and genomics traditional physiology and biochemistry and advanced bioinformatics and modelling Such an interdisciplinary approach has been practised in various research groups for many years However it does not seem to be fully covered in the format of book publications We want to initiate a book project on crop systems biology narrowing the gaps between genotypes and phenotypes and the gaps between crop modelling and genetics genomics for publication in 2013 2014 The book will be meant for those scientists and graduate students from fundamental plant biology and applied crop science who are interested in bridging the gap between these two fields We have invited a group of scientists who have very good track records in publishing excellent papers in this field or in a closely related area to contribute chapters to this new book and they have agreed to do so
