instrumentation *Identity Card Technologies* Great Britain: Parliament: House of Commons: Science and Technology Committee,2006-08-04 This report focuses upon the Home Office s identity cards scheme which uses various technologies including biometrics information and communication technology ICT and smart cards It explores the ways in which scientific advice risk and evidence are being managed in relation to technologies that are continually developing The Home Office has followed good practice by the establishment of advisory committees the use of Office of Government Commerce OGC Gateway Reviews and the development of risk management strategies along with a policy of gradual implementation But the Committee has identified weaknesses in the use of scientific advice and evidence There has been a lack of transparency surrounding the incorporation of scientific advice the procurement process and the ICT system Consultations have been limited in scope and their objectives have been unclear Only some aspects of the scheme such as the biometrics have been determined The Home Office s decisions demonstrate an inconsistent approach to scientific evidence and the Committee is concerned that choices regarding biometric technology have preceded trials With extensive trialling still to take place the Committee is sceptical about the validity of projected costs The Committee recommends that the Home Office seeks advice on ICT from senior and experienced professionals and establishes an ICT assurance committee It is crucial that the Home Office increases clarity and transparency across the programme not only in problem areas The programme should also be flexible enough to change should evidence emerge that contradicts existing assumptions **Handbook of Remote**

Biometrics Massimo Tistarelli,Stan Z. Li,Rama Chellappa,2009-06-02 The development of technologies for the identification of individuals has driven the interest and curiosity of many people Spearheaded and inspired by the Bertillon coding system for the classification of humans based on physical measurements scientists and engineers have been trying to invent new devices and classification systems to capture the human identity from its body measurements One of the main limitations of the precursors of today s biometrics which is still present in the vast majority of the existing biometric systems has been the need to keep the device in close contact with the subject to capture the biometric measurements This clearly limits the applicability and convenience of biometric systems This book presents an important step in addressing this limitation by describing a number of methodologies to capture meaningful biometric information from a distance Most materials covered in this book have been presented at the International Summer School on Biometrics which is held every year in Alghero Italy and which has become a flagship activity of the IAPR Technical Committee on Biometrics IAPR TC4 The last four chapters of the book are derived from some of the best presentations by the participating students of the school The educational value of this book is also highlighted by the number of proposed exercises and questions which will help the reader to better understand the proposed topics Iris and Periocular Recognition using Deep Learning Ajay Kumar,2024-06-12 Iris and Periocular Recognition using Deep Learning systematically explains the fundamental and most advanced techniques for ocular imprint based human identification with many applications in sectors such as healthcare online education e business
