Application of Superhypergraphs-Based Domination Number in Real World M. Hamidi,M.

Taghinezhad,2023-01-01 The concept of quasi superhypergraphs as a generalization of graphs makes a relation between some sets of elements in detail and in general in the form of parts to parts parts to whole and whole to whole elements of sets and is very useful in the real world This paper considers the novel concept of quasi superhypergraphs and introduces the notation of dominating set and domination number of quasi super hypergraphs Especially we have analyzed the domination number of uniform quasi superhypergraphs and computed their domination number on different cases The ows from right to left from left to right and two sided as maps play a main role in quasi superhypergraphs and it is proved that domination numbers of quasi superhypergraphs are dependent on the ows We define the valued star quasi superhyper graphs for the design of hypernetworks and compute their domination numbers We have shown that the domination numbers of valued star quasi superhypergraphs are distinct in different ow states In final we introduce some applications of dominating sets of quasi superhyper graphs in hypernetwork as computer networks and treatment networks with the optimal application

The Concentration of Measure Phenomenon Michel Ledoux, 2001 The observation of the concentration of measure phenomenon is inspired by isoperimetric inequalities A familiar example is the way the uniform measure on the standard sphere S_n becomes concentrated around the equator as the dimension gets large This property may be interpreted in terms of functions on the sphere with small oscillations an idea going back to Levy The phenomenon also occurs in probability as a version of the law of large numbers due to Emil Borel This book offers the basic techniques and examples of the concentration of measure phenomenon The concentration of measure phenomenon was put forward in the early seventies by V Milman in the asymptotic geometry of Banach spaces It is of powerful interest in applications in various areas such as geometry functional analysis and infinite dimensional integration discrete mathematics and complexity theory and probability theory Particular emphasis is on geometric functional and probabilistic tools to reach and describe measure concentration in a number of settings This book presents concentration functions and inequalities isoperimetric and functional examples spectrum and topological applications product measures entropic and transportation methods as well as aspects of M Talagrand's deep investigation of concentration in product spaces and its application in discrete mathematics and probability theory supremum of Gaussian and empirical processes spin glass random matrices etc Prerequisites are a basic background in measure theory functional analysis and probability theory
