Abstract:- Cyber attacks are increasing day by day . So network security (to prevent the data from getting theft) is a must. There are various ways to prevent the data from getting stolen and Cryptography is one of them. Cryptography is a way of storing and transmitting the data in a particular form so that only those for whom it is intended can read it and process it. In this paper we will learn about Cryptography, its goals , how it helps in preventing cyber attacks .

I. INTRODUCTION

Cyber Security refers to the techniques of protecting computers, networks, programs and data from unauthorized access or attacks that are aimed for exploitation. Cryptography is about Mathematical functions and can be applied to technical solutions for increasing cyber security. Transforming the confidential data in a coding form and then transmitting it so that only authorized users can work on it is known as Cryptography. Cryptography is originated from Greek word "crypto" means hidden and "graphy" means writing, so cryptography means hidden or secret writing.

II. COMPONENTS OF CRYPTOGRAPHIC SYSTEM

Components of Cryptographic system are as follows:

- A. Plain Text: The confidential data that should be secured while transmission is referred as plain text.
- B. Cipher Text: The transformed plain texts that cannot be understood without applying encryption algorithm and encryption key over the plain text.
- C. Encryption Algorithm: It is a mathematical process which is used to convert plain text into cipher text using some encryption key.
- D. Decryption Algorithm: This is the reverse process of encryption algorithm. To produce the original text we use cipher text and encryption algorithm.
- E. Encryption key: The value which is applied within encryption algorithm to get the cipher text from the plain text is called the encryption key. To make the cryptographic system successful safeguarding of encryption key is important. The value of encryption key is known to both sender and receiver or only to the sender.
- F. Decryption key: To get the plain text back from the ciphertext decryption key is applied within the decryption algorithm. The value of decryption key is known only to the receiver.
