Plant Life Cycles

FROM SEED TO TREE

Every plant begins its life as a tiny seed. The seed contains all the information the plant needs to grow. When the seed is planted in the soil, it begins to grow. The first stage is the seedling, which has two small leaves. As the seedling grows, it develops roots and a stem. The seedling then grows into a sapling, which has a thicker stem and larger leaves. Finally, the sapling grows into a tree, which has a very thick stem and many large leaves. The tree can live for many years.
