

## Unit 1: Solutions

This level activity will help you more closely understand your:

- 1. Science Inquiry... You will explore various aspects of solution chemistry by developing models and analyzing an independent variable, concentration, the solution concentration, your solute, & solvent ions.
- 2. ICL ICL... You will use mathematics to analyze solubility, concentration, mass, and percent weight percent ICL ICL systems that are uniquely and physically related.
- 3. ICL Chemistry Skills... You will graphing relationships for solubility.

### Introduction

Imagine that you are a food scientist who is asked to plan the manufacturing process for various concentrations of solutions. Your students will analyze the mass by analyzing the solubility mass from 1000 to 1000 mg of water and then finding the mass of a food.

This experiment will help you find the mass of the solution that is composed of water and solute.

|   | Ingredient         | Formula                  | Mass per 1000 mL water |
|---|--------------------|--------------------------|------------------------|
| 1 | Salt               | $\text{NaCl}$            | 1000 g                 |
| 2 | Salt               | $\text{K}_2\text{MnO}_4$ | 1000 g                 |
| 3 | Salt               | $\text{H}_2\text{O}$     | 1000 g                 |
| 4 | Any other solution |                          | 1000 g                 |

The manufacturing process will be based on the mass of water and solute. You will find the mass of the solution that is the mass of the ingredients. The appropriate amount of each ingredient and the concentration (mass of solute, mass of water, and mass of the solution) will be found. You will find the mass of the solution that is the mass of the ingredients. You will find the mass of the solution that is the mass of the ingredients.

### Conclusions and Analysis

Task: Explain the manufacturing process.

Based on the data, you will find the mass of the solution that is the mass of the ingredients. You will find the mass of the solution that is the mass of the ingredients. You will find the mass of the solution that is the mass of the ingredients.

Key concepts: mass, concentration, solubility, concentration, mass, and percent weight percent. Solubility (mass of solute, mass of water, and mass of the solution) will be found. You will find the mass of the solution that is the mass of the ingredients.
