Polymerase Chain Reaction

Synopsis

In this Polymerase Chain Reaction (PCR) simulation, you will see through eight steps another method, known as restriction fragment length polymorphism (RFLP), for identifying the crime scene DNA sample. First, we'll go to the subject matter explained in the text that this simulation may help to understand their goals.

Design Goal

After completing, you will go to the next lesson in the curriculum. The scenario of this game is designed by using a mixture of three samples, and this simulation may help the crime scene. It is up to you to find the correct sample accurately. The PCR experiment.

How the structure of this sample explains up to now

In the simulation, you will see the PCR experiment on the computer. First, illustrating the structure of this and the explanation of the structure will be used to explain the experimental process. As well as all specifications of the PCR itself.

Identify the sample

In this PCR simulation, you will select your sample and other correct samples from the computer. You will also find the sample. The polymerase chain reaction will use the PCR simulation. The structure.

Learning Objectives

In this case of this simulation, you will see the results:

1. Identify the structure of the polymerase chain reaction and explain it.
2. Explain the PCR experiment using this, from a text source on the simulation.
