### 4.2 User Requirements

[Provide requirements of the system, user or business, to classes/categories of users. Provide the type of user characteristics of each set of users. List the functional req user requirement. As the functional requirements are de functional requirements are traced to the user requirement functional requirements is not mandatory in the traceability parent requirements are already traced to them.

User requirement information can be in text or process flow class that shows what inputs will initiate the system functionality.

what outputs are expected to be generated by the system. The scenarios should be comprehensive, to the extent that all user types and all major functions are covered. Give each user requirement a unique number. Typically, user requirements have a numbering system that is separate from the functional requirements. Requirements may be labeled with a leading "U" or other label indicating user requirements.]

### 4.3 Data Flow Diagrams

[Decompose the context level diagrams to determine the functional requirements. Data flow diagrams should be decomposed down to the functional primitive level. These diagrams are further decomposed during design.]

### 4.4 Logical Data Model/Data Dictionary

[Create the initial Logical Data Model. Describe data requirements by providing data entities, decomposition, and definitions in a data dictionary. The data requirements describe the business data needed by the application system. Data requirements do not describe the physical database and are not at the level of identifying field names.]

### 4.5 Functional Requirements

[List the functional requirements of the system.]

#### 4.5.1 Functional Requirements Group 1

[List the functional requirements for each functional requirements group.]
