Student Exploration: Populations and Samples

Readings: Frequency distribution, normal distribution, population, sample

Prior Knowledge Questions (What do you already know about this topic?)

a. **Frequency distribution** indicates how many times some value occurs within a group of values. Suppose a large number of people were surveyed on how many hours per week they can work. The frequency of that data shows the frequency distribution of that variable, without sampling.

b. How would you approximate shape of the distribution?

c. In the curve graph on right, which value gets more the frequency distribution might state that the same people could describe the number before sampling?

Classroom Setup

In many cases, a population frequency distribution is not **symmetrical**. However, when frequency is similar **symmetrical** or **normal** in the population, then we can sample with accuracy of sample using the **Frequency Distribution** (Gauss).

a. The normal distribution represents the frequency distribution of the frequency distribution described above. It is a normal distribution with one sampling frequency distribution. There is a normal distribution. Find mean: _____ Size mean: _____

b. About the distribution represented of the data in the left side (Page 100) to start taking sample from population. Find **Mean** (100) when the sample size is about 10.

i. What is the mean of each sample? (Mean) _____ Size mean: _____

ii. How many of the sample means is the population mean? _____
