

A Feasibility Study on Monographs

1. Introduction

The library sector has, for many years, been experimenting and developing collaborative programmes in order to achieve a wide range of goals – from maximising economies of scale and savings to training staff and students. The UK Research Reserve (UKRR) programme is one example; it has coordinated journal de-duplication activities across the UK since 2007. It has processed more than 104km of material offered by participating members and enabled libraries to make strategic decisions about their collections and space. It has also fundamentally shifted the culture within and beyond the Higher Education sector.

The community has made significant progress in terms of journals, and programmes such as UKRR demonstrate what can be achieved when the community works together. However, monographs remain untackled at a national level and it is widely accepted that they present very different challenges from journals. Is the UKRR model the right one to manage the nation's print monograph collections? In the monograph land, here in the UK and internationally, is there any local, grass-root initiative that has begun to look at relevant issues? What would a feasible, efficient, and economically viable model for national monograph management be if the community decides to tackle this collaboratively and on a large scale? Is there an appetite for such a collaborative model?

As pressures on space continue to rise, and as more and more materials become available digitally, the National Monographs Steering Group invites tenders for proposals to undertake a feasibility study that will explore various aspects relating to monographs, identify potential solutions to meet the community's needs, and to address issues associated with the national monograph management agenda.

The feasibility study will be jointly funded by HEFCE (through UKRR), RLUK, and SCONUL.

2. The National Monographs Steering Group

Representatives from six organisations have come together to form the National Monographs Steering Group (NMSG) to develop and set the themes surrounding the management of monographs. The Group comprises of the British Library (BL), Higher Education Funding Council for England (HEFCE), Jisc, Research Libraries UK (RLUK), Society of College, National and University Libraries (SCONUL), and UKRR.

2.1 BL

The BL is the national library and initiated the UKRR concept with its HE partners. Being UKRR's strategic partner, the BL plays a key role in delivering journal de-duplication services to the sector. The BL is exploring shared storage with the cultural sector with a view to securing capital funding for a further high density storage facility at Boston Spa. This model is currently being looked at internally, with the potential to expand to HE and other public service sectors.

The Information System Consultant's Handbook William S. Davis, David C. Yen, 1998-12-28 The Information System Consultant's Handbook familiarizes systems analysts, systems designers, and information systems consultants with underlying principles, specific documentation, and methodologies corresponding to the primary stages in the systems development life cycle. The book divides into eight sections: Principles, Information Gathering and Problem Definition, Project Planning and Project Management, Systems Analysis, Identifying Alternatives, Component Design, Testing and Implementation, Operation and Maintenance. Eighty-two chapters comprise the book, and each chapter covers a single tool, technique, set of principles, or methodology. The clear, concise narrative, supplemented with numerous illustrations and diagrams, makes the material accessible for readers, effectively outlining new and unfamiliar analysis and design topics.

SME Mining Engineering Handbook, Third Edition Peter Darling, Society for Mining, Metallurgy, and Exploration (U.S.), 2011 This third edition of the SME Mining Engineering Handbook reaffirms its international reputation as the handbook of choice for today's practicing mining engineer. It distills the body of knowledge that characterizes mining engineering as a disciplinary field and has subsequently helped to inspire and inform generations of mining professionals. Virtually all of the information is original content representing the latest information from more than 250 internationally recognized mining industry experts. Within the handbook's 115 thought-provoking chapters are current topics relevant to today's mining professional: Analyzing how the mining and minerals industry will develop over the medium and long term; why such changes are inevitable; what this will mean in terms of challenges and how they could be managed; Explaining the mechanics associated with the multifaceted world of mine and mineral economics; from the decisions associated with how best to finance a single piece of high-value equipment to the long-term cash flow issues associated with mine planning at a mature operation; Describing the recent and ongoing technical initiatives and engineering developments in relation to robotics, automation, acid rock drainage, block caving, optimization, or process dewatering methods; Examining in detail the methods and equipment available to achieve efficient, predictable, and safe rock breaking; whether employing a tunnel boring machine for development work, mineral extraction using a mobile miner or cast blasting at a surface coal operation; Identifying the salient points that dictate which is the safest, most efficient, and most versatile extraction method to employ, as well as describing in detail how each alternative is engineered; Discussing the impacts that social and environmental issues have on mining from the pre-exploration phase to end-of-mine issues and beyond, and how to manage these two increasingly important factors to the benefit of both the mining companies and other stakeholders.
