Assessment of Planetary Protection Requirements for Mars Sample Return Missions National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on the Review of Planetary Protection Requirements for Mars Sample Return Missions, 2009-06-06 NASA maintains a planetary protection policy to avoid the forward biological contamination of other worlds by terrestrial organisms and back biological contamination of Earth from the return of extraterrestrial materials by spaceflight missions Forward contamination issues related to Mars missions were addressed in a 2006 National Research Council NRC book Preventing the Forward Contamination of Mars However it has been more than 10 years since back contamination issues were last examined Driven by a renewed interest in Mars sample return missions this book reviews updates and replaces the planetary protection conclusions and recommendations contained in the NRC's

1997 report Mars Sample Return Issues and Recommendations The specific issues addressed in this book include the following The potential for living entities to be included in samples returned from Mars Scientific investigations that should be conducted to reduce uncertainty in the above assessment The potential for large scale effects on Earth's environment by any returned entity released to the environment Criteria for intentional sample release taking note of current and anticipated regulatory frameworks and The status of technological measures that could be taken on a mission to prevent the inadvertent release of a returned sample into Earth's biosphere

**Grading NASA's Solar System Exploration Program** National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Assessing the Solar System Exploration Program, 2008-04-25 The NASA Authorization Act of 2005 directed the agency to ask the NRC to assess the performance of each division in the NASA Science directorate at five year intervals In this connection NASA requested the NRC to review the progress the Planetary Exploration Division has made in implementing recommendations from previous relevant NRC studies This book provides an assessment of NASA's progress in fulfilling those recommendations including an evaluation how well it is doing and of current trends The book covers key science questions flight missions Mars exploration research and analysis and enabling technologies Recommendations are provided for those areas in particular need of improvement

*Asteroids IV* Patrick Michel, Francesca E. DeMeo, William F. Bottke, 2015-12-31 Over the past decade asteroids have come to the forefront of planetary science Scientists across broad disciplines are increasingly recognizing that understanding asteroids is essential to discerning the basic processes of planetary formation including how their current distribution bespeaks our solar system's cataclysmic past For explorers the nearest asteroids beckon as the most accessible milestones in interplanetary space offering spaceflight destinations easier to reach than the lunar surface For futurists the prospects of asteroids as commercial resources tantalize as a twenty first century gold rush albeit with far greater challenges than faced by nineteenth century pioneers For humanity it is the realization that asteroids matter It is not a question of if but when the next major impact will occur While the disaster probabilities are thankfully small fully cataloging and characterizing the potentially hazardous asteroid population remains unfinished business Asteroids IV sets the latest

scientific foundation upon which all these topics and more will be built upon for the future Nearly 150 international authorities through more than 40 chapters convey the definitive state of the field by detailing our current astronomical compositional geological and geophysical knowledge of asteroids as well as their unique physical processes and interrelationships with comets and meteorites Most importantly this volume outlines the outstanding questions that will focus and drive researchers and students of all ages toward new advances in the coming decade and beyond

*Vision and Voyages for Planetary Science in the Decade 2013-2022* National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on the Planetary Science Decadal Survey, 2012-01-30 In recent years planetary science has seen a tremendous growth in new knowledge Deposits of water ice exist at the Moon's poles Discoveries on the surface of Mars point to an early warm wet climate and perhaps conditions under which life could have emerged Liquid methane rain falls on Saturn's moon Titan creating rivers lakes and geologic landscapes with uncanny resemblances to Earth's

*Vision and Voyages for Planetary Science in the Decade 2013-2022* surveys the current state of knowledge of the solar system and recommends a suite of planetary science flagship missions for the decade 2013-2022 that could provide a steady stream of important new discoveries about the solar system Research priorities defined in the report were selected through a rigorous review that included input from five expert panels NASA's highest priority large mission should be the Mars Astrobiology Explorer-Cacher (MAX-C) a mission to Mars that could help determine whether the planet ever supported life and could also help answer questions about its geologic and climatic history Other projects should include a mission to Jupiter's icy moon Europa and its subsurface ocean and the Uranus Orbiter and Probe mission to investigate that planet's interior structure atmosphere and composition For medium size missions *Vision and Voyages for Planetary Science in the Decade 2013-2022* recommends that NASA select two new missions to be included in its New Frontiers program which explores the solar system with frequent mid size spacecraft missions If NASA cannot stay within budget for any of these proposed flagship projects it should focus on smaller less expensive missions first

*Vision and Voyages for Planetary Science in the Decade 2013-2022* suggests that the National Science Foundation expand its funding for existing laboratories and establish new facilities as needed It also recommends that the program enlist the participation of international partners This report is a vital resource for government agencies supporting space science the planetary science community and the public
