Cyber-Physical Systems Engineering and Control Alla G. Kravets,Alexander A. Bolshakov,Maxim V.

Shcherbakov,2023-07-31 This book is devoted to the study of engineering and control technologies for the cyber physical systems development This book defines the approaches in the engineering leverage the exploitation of artificial intelligence and most urgent computing methods The authors study the activities allows for the developing new and perspective concepts of robotics systems combining various machine learning methods uncertainty explanation approaches computer vision and unmanned aerial systems control technologies including artificial neural networks and simulation modeling by addressing a large scale of applications The book also describes new materials engineering as well as implementation of these technologies in the different domains such as polymeric film production polymer composition and roller squeezing of leather in order to realize the novel cyber physical systems their functionalities and features The authors describe the development of method for increasing the software efficiency considering the increasing complexity of the computing systems and the importance of ensuring accuracy and velocity of modelling The book also analyses algorithms for fuzzy models and systems including the cyber physical real time systems and non stationary object with discrete time The authors highlight the problem of ensuring the quality on engineering technologies for cyber physical systems as the most important and consider different approaches to its solution *Real-Time Sensor Networks and Systems for the Industrial IoT* Christos

Koulamas,Mihai T. Lazarescu,2020-11-18 The Industrial Internet of Things Industrial IoT IIoT has emerged as the core construct behind the various cyber physical systems constituting a principal dimension of the fourth Industrial Revolution While initially born as the concept behind specific industrial applications of generic IoT technologies for the optimization of operational efficiency in automation and control it quickly enabled the achievement of the total convergence of Operational OT and Information Technologies IT The IIoT has now surpassed the traditional borders of automation and control functions in the process and manufacturing industry shifting towards a wider domain of functions and industries embraced under the dominant global initiatives and architectural frameworks of Industry 4 0 or Industrie 4 0 in Germany Industrial Internet in the US Society 5 0 in Japan and Made in China 2025 in China As real time embedded systems are quickly achieving ubiquity in everyday life and in industrial environments and many processes already depend on real time cyber physical systems and embedded sensors the integration of IoT with cognitive computing and real time data exchange is essential for real time analytics and realization of digital twins in smart environments and services under the various frameworks provisions In this context real time sensor networks and systems for the Industrial IoT encompass multiple technologies and raise significant design optimization integration and exploitation challenges The ten articles in this Special Issue describe advances in real time sensor networks and systems that are significant enablers of the Industrial IoT paradigm In the relevant landscape the
