

CONTROLS AND THEIR FUNCTIONS

This short description of the function of each control and jack supplies background information to proper operation. For actual Operating Instructions, refer to *Using Your Transceiver*.

Microphone . . . The dynamic microphone must be connected to this jack. To Transmit, press the button on its end and talk into the mic. To Receive, release the button.

When transmitting, hold the microphone at an angle, two or three inches (5-7.5 cm) from your mouth and speak clearly in a normal voice.

Headset . . . Plug in communicating type headphones for private listening, or in areas where background noise is excessive (vicinity of the work of an accident or fire, etc.). When you plug in the headset, it automatically disconnects the internal speaker (or an external speaker).

Channel Selector . . . Use to select any one of the standard 80 CB channels.

VOLUME with "ON/OFF" switch . . . Turn clockwise to apply power to the unit and then adjust for the desired level of sound from the speaker. When using PA, it controls the level of the PA output.

SQUELCH . . . Sets the level of the internal Squelch circuitry to shut out the background noise when no signal is being received. When properly set, it allows signals to come through, but shuts off the receiver sound when no signal is being received. This eliminates annoying background/atmospheric noise during reception and listening conditions.

If set too high, you may miss some of the weaker signals. Operating conditions will determine the best setting.

RF GAIN . . . Varies the sensitivity of the RF amplifier stages of the Receiver circuitry. For good reception, set RF GAIN to maximum and adjust VOLUME for a suitable listening level. Under fair signal conditions, you may want to turn RF GAIN down a little and raise VOLUME as required.

CLARIFIER . . . Functions as a "fine tuning" (or "dial" tuning) for reception of Single Sideband or AM signals when the Mode Switch is set to either LSB or USB. This permits you to tune your receiver to exactly the same frequency of any other station or stations which you are communicating with.

AM/LSB/USB Mode Switch . . . set this switch to the desired mode of operation for both transmit and receive. When in the AM position, both transmitter and receiver sections are operated for AM. When in the LSB position, the Receiver operates to receive only the lower sideband portion of a signal, the Transmitter will transmit only the lower sideband of the modulated waveform. In the USB position, the Receiver operates only to receive the upper sideband portion of a signal, the Transmitter will transmit only the upper sideband of the modulated waveform.

PA push-button . . . Controls the function of the audio amplifier installation circuitry when the Microphone button is pressed. When the PA button is in the "off" position, the Microphone button turns the function; the Microphone turns on the Public Address Amplifier function. For PA operation you must have a PA speaker connected to the PA jack on the rear chassis.

NR push-button (Noise Blanker) . . . Press in to cut out annoying impulse-type noise. Press again to release this function. This is particularly effective for ignition noise on both AM and USB.

ALL push-button (Automatic Noise Limiter) . . . Press in to cut out annoying fast-rise noise. Press again to release this function. This will be particularly effective for AM signals.

RF S Meter . . . gives visual indication of signal strength. When receiving, the RF S Meter shows the strength of incoming signals; a change of one "S" unit indicates a change of 6 dB in signal strength. The meter is set up so that a 100 microvolt signal will produce a reading of 1.5. When Transmitting, the RF S meter gives a visual indication of output power from the Transceiver.

THE REAR PANEL

PA Speaker Jack . . . connect an 8 ohm Public Address speaker to this jack for PA use. We recommend Radio Shack's RS-1184, weatherized, rugged PA Speaker, as an ideal unit for either PA or External Speaker applications.

External Speaker Jack . . . if you want to use an external speaker, plug it into this jack. You should use a standard 8 ohm type. When a standard 1/4" (6.35 mm) mono phone plug is inserted into this jack, the built-in speaker is automatically disconnected.

ANTENNA Coax Connector . . . connect your CB antenna to this (SO-239 type) connector PL-259 connector.

FUSE . . . is for protection of the Transceiver and its source of AC power; if the Transceiver does not operate from AC power, check this fuse—replace only with the same type and rated (2 amp).

13.8V DC Connector and Power Cable with in-line fuse . . . this cable is to be connected to a source of 13.8 volts DC power, negative or positive ground. The Red wire with the in-line fuse must be connected to the + side and the Black wire to the - side.

12V AC Connector . . . plug in the AC power cord when operating from a source of 120 volts, 60 Hz AC power. If you plug in both connectors, AC will be operational, DC will not. For DC operation, use the DC cable only.
