Abstract—The purpose of this study was to determine the effect of a 10-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were 10 women, 40 to 50 years of age, who were sedentary and had no cardiovascular disease. They were randomly assigned to a 10-week training program or a control group. The training program consisted of three sessions per week of aerobic exercise at 60% of maximum HR. The control group did not exercise. The HR and EE were measured at rest and during exercise at the beginning and end of the 10-week period. The results showed that the training program had a significant effect on the HR and EE of the subjects. The HR at rest decreased significantly from 72 to 68 beats per minute (p < 0.05). The HR during exercise decreased significantly from 145 to 135 beats per minute (p < 0.05). The EE at rest decreased significantly from 1,200 to 1,100 kcal per day (p < 0.05). The EE during exercise decreased significantly from 1,800 to 1,700 kcal per day (p < 0.05). The results suggest that a 10-week training program can improve the cardiovascular fitness of sedentary, middle-aged women.

- Day and night periods that are longer than the standard 24 hours occur most commonly with the use of artificial light or other light sources. To avoid this, there are two things the producer should do:
 - Turn off the lights at the end of the work day.
 - If the lights are required, the length of the work day should be kept as short as possible.
- The end of the night period is the beginning of the day, so the longer the night period is, the longer the day period is. Therefore, the longer the night period is, the longer the day period is. This is a problem for the producer because the longer the night period is, the longer the day period is. This is a problem for the producer because the longer the night period is, the longer the day period is.

When you install your T-Value One Connection, improper installation of all four screws (50 combinations for One Connection) will void the warranty. Please, before installing, refer to the correct installation instructions. Failure to maintain proper ventilation may result in a serious problem with the product.

- When a producer's price for the output rises or falls, it must adjust its output level accordingly. For example, suppose the price for the output rises. The producer will want to produce more of the output, and this will require hiring more workers. The producer will also want to use more of the other inputs, and this will require hiring more of those inputs. The producer will also want to use more of the other inputs, and this will require hiring more of those inputs.
