Mass Transfer with Chemical Reaction in Multiphase Systems E. Alper, 2013-11-11 The phenomenon of mass transfer with chemical reaction takes place whenever one phase is brought into contact with one or more other phases not in chemical equilibrium with it This phenomenon has industrial biological and physiological importance In chemical process engineering it is encountered in both separation processes and reaction engineering In some cases a chemical reaction may deliberately be employed for speeding up the rate of mass transfer and or for increasing the capacity of the solvent in other cases the multiphase reaction system is a part of the process with the specific aim of product formation Finally in some cases for instance distillation with chemical reaction both objectives are involved Although the subject is clearly a chemical engineering undertaking it requires often a good understanding of other subjects such as chemistry and fluid mechanics etc leading to publications in diversified areas On the other hand the subject has always been a major field and one of the most fruitful for chemical engineers
