We present a cognitive model of inducing verb selectional preferences from individual verb usage. The selectional preferences for each verb argument are represented as a probability distribution over the set of semantic properties that the argument can possess: a *semantic profile*. The semantic profiles yield verb-specific conceptualizations of the arguments associated with a syntactic position. The proposed model can learn appropriate verb profiles from a small set of noisy training data, and can use them in simulating human plausibility judgments and predicting invisible critical alternatives.

Infants have preferences for the semantic properties of the arguments filling a particular role. For example, the verb *eat* expects that the object occupying its theme role will have the property of being edible, among others. Learning verb selectional preferences is an important aspect of human language acquisition, and the acquired preferences have been shown to guide children's expectations about missing or upcoming arguments in language comprehension (Gleitman et al., 2003a).

Rumelhart (1990) introduced a systematic approach to learning and use of word selectional preferences. In this framework, a semantic class hierarchy for words is used, together with statistical tests, to measure a word's selectional preferences for a particular semantic position in the form of a distribution.

over all the classes that can occur in that position. Rumelhart's model was proposed as a model of human learning of *selectional preferences* that made minimal representational assumptions; it showed how such preferences could be acquired from usage data and an existing conceptual hierarchy. However, his and later computational models (see Section 2) have properties that do not match with certain cognitive plausibility criteria for a child language acquisition model. All three models use the training data in "batch mode", and most of them use information-theoretic measures that rely on total counts from a corpus. Therefore, it is not clear how the representation of selectional preferences could be updated incrementally in these models as the parent receives more data. Moreover, the assumption that children have access to a full hierarchical representation of semantic classes may be too strict. We propose an alternative view in this paper which is more plausible in the context of child language acquisition.

In previous work (Alshabi and Stevenson, 2005), we have proposed a single-based computational model of early verb-learning that uses Bayesian learning and prediction to model language acquisition and use. Individual verb ranges are incrementally grouped to form emergent classes of linguistic constructions that share semantic and syntactic properties. We have shown that our Bayesian model can incrementally acquire a general conception of the semantic roles of predicates based only on exposure to individual verb ranges (Alshabi and Stevenson, 2007). The model forms probabilistic associations between the semantic properties of arguments, their syntactic positions, and the semantic properties

Figure 6: Similarity with the base profile for Abundances and Normalized values

than words with stronger preferences. We use the cosine measure to estimate the similarity between two profiles α and β :

$$\text{covariance}(p, q) = \frac{p \cdot q - |p| |q| \cos(\theta)}{2} \quad (1)$$

The similarity values for the Alternating and Non-alternating verbs are shown in Figure 6. The largest values represent more similarity with the basic prefix, which means a weaker selectional preference. The means for the Alternating and Non-alternating verbs were respectively 0.76 and 0.83, which confirm the hypothesis that verbs participating in implicit object alternations select more strongly for the direct objects than verbs that do not. However, like Ruvinski (1996), we find that it is not possible to set a threshold that will distinguish the two sets of verbs.

We have proposed a cognitively plausible model for learning selectional preferences from instances of verb usage. The model represents verb selectional preferences as a semantic profile, which is a probability distribution over the semantic properties that an argument can take. One of the strengths of our model is the incremental nature of its learning mechanism, in contrast to other approaches which learn selectional preferences in batch mode. Here we have only reported the results for the final stage of learning, but the model allows us to monitor the semantic

profiles during the course of learning, and compare it with child data for different age groups, as we do with semantic roles (Mollath and Stevenson, 2007). We have shown that the model can predict appropriate semantic profiles for a variety of verbs, and use these profiles to simulate human judgements of verb-argument plausibility, using a small and highly noisy set of training data. The model can also use the profiles to measure verb-argument compatibility, which we used to study some of the implicit object alternations

Scholarly Communications John J. Regazzi, 2015-02-12 *Scholarly Communications A History from Content as King to Content as Kingmaker* traces the development of scholarly communications from the creation of the first scientific journal through the wide diversity of professional information services today Unlike any other book this work is an authoritative history by the past President of Elsevier and current Professor at Long Island University which examines the changing nature of scholarly communication throughout its history including its research importance as well as its business value It specifically covers four key themes the value of scholarly content and information at various stages of its development and use the role that technology has played on the use importance and value of scholarly information and research communications the changing business models affecting the system of scholarly communication from the way it is produced to how it is distributed and consumed and some of the implications of mobile cloud and social computing technologies on the future of scholarly communications Attention is paid to analyzing the structural changes that the professional publishing community now faces Regazzi examines research content as an economic good how technology and business models have greatly affected the value of scholarly publishing and the drivers of the future sustainability of our system of scholarly communication

Theories of Informetrics and Scholarly Communication

Cassidy R. Sugimoto, 2016-02-22 *Scientometrics* have become an essential element in the practice and evaluation of science and research including both the evaluation of individuals and national assessment exercises Yet researchers and practitioners in this field have lacked clear theories to guide their work As early as 1981 then doctoral student Blaise Cronin published *The need for a theory of citing* a call to arms for the fledgling scientometric community to produce foundational theories upon which the work of the field could be based More than three decades later the time has come to reach out the field again and ask how they have responded to this call This book compiles the foundational theories that guide informetrics and scholarly communication research It is a much needed compilation by leading scholars in the field that gathers together the theories that guide our understanding of authorship citing and impact

Journal Article Writing and Publication Sharon A. Gutman, 2024-06-01 The ability to demonstrate that a specific health care profession provides valuable and effective services that meet society's health needs is a major objective for all health care academicians and researchers Such skills are critical to ensure service reimbursement from an increasingly small pool of health care dollars Demonstrating clinical effectiveness depends on the reporting of written research results through journal publication so that the health care community and larger society will be able to access and read evidence supporting health care services Today several clinical reporting standard guidelines have been created by researchers to enhance the ability of readers to evaluate the quality and value of studies *Journal Article Writing and Publication* is the first text to compile those clinical research reporting standards in one source and helps educators and novice researchers to better understand the skills needed for journal publication Health care researchers must

Beyond open access: visions for open evaluation of scientific papers by post-publication peer review Nikolaus Kriegeskorte,Diana Deca, A scientific publication system needs to provide two basic services access and evaluation The traditional publication system restricts the access to papers by requiring payment and it restricts the evaluation of

papers by relying on just 2-4 pre-publication peer reviews and by keeping the reviews secret. As a result, the current system suffers from a lack of quality and transparency of the peer review evaluation process, and the only immediately available indication of a new paper's quality is the prestige of the journal it appeared in. Open access is now widely accepted as desirable and is slowly beginning to become a reality. However, the second essential element, evaluation, has received less attention. Open evaluation, an ongoing post-publication process of transparent peer review and rating of papers, promises to address the problems of the current system. However, it is unclear how exactly such a system should be designed. The evaluation system steers the attention of the scientific community and thus the very course of science. For better or worse, the most visible papers determine the direction of each field and guide funding and public policy decisions. Evaluation therefore is at the heart of the entire endeavor of science. As the number of scientific publications explodes, evaluation and selection will only gain importance. A grand challenge of our time, therefore, is to design the future system by which we evaluate papers and decide which ones deserve broad attention. So far, scientists have left the design of the evaluation process to journals and publishing companies. However, the steering mechanism of science should be designed by scientists. The cognitive, computational, and brain sciences are best prepared to take on this task, which will involve social and psychological considerations, software design, and modeling of the network of scientific papers and their interrelationships. This Research Topic in *Frontiers in Computational Neuroscience* collects visions for a future system of open evaluation. Because critical arguments about the current system abound, these papers will focus on constructive ideas and comprehensive designs for open evaluation systems. Design decisions include: Should the reviews and ratings be entirely transparent, or should some aspects be kept secret? Should other information, such as paper downloads, be included in the evaluation? How can scientific objectivity be strengthened and political motivations weakened in the future system? Should the system include signed and authenticated reviews and ratings? Should the evaluation be an ongoing process such that promising papers are more deeply evaluated? How can we bring science and statistics to the evaluation process, e.g., should rating averages come with error bars? How should the evaluative information about each paper, e.g., peer ratings, be combined to prioritize the literature? Should different individuals and organizations be able to define their own evaluation formulae, e.g., weighting ratings according to different criteria? How can we efficiently transition toward the future system? Ideally, the future system will derive its authority from a scientific literature on community-based open evaluation. We hope that these papers will provide a starting point.

Dean Keith Simonton, 2004-05-03 Psychologists sociologists philosophers historians and even scientists themselves have often tried to decipher the basis for creativity in science Some have attributed creativity to a special logic the so called scientific method whereas others have pointed to the inspirations of genius or to the inevitable workings of the zeitgeist Finally some have viewed scientific breakthroughs as the product of chance as witnessed in the numerous episodes of serendipity Too often these four alternative interpretations are seen as mutually exclusive Yet the central thesis of this book is that the chance logic genius and zeitgeist perspectives can be integrated into a single coherent theory of creativity in science But for this integration to succeed change must be elevated to the status of primary cause Logic genius and the zeitgeist still have significant roles to play but mainly operate insofar as they enhance or constrain the operation of a chance combinatorial process **How to Write and Publish a Scientific Paper** Barbara Gastel, Robert A.
