Sci 2lab Biodiversity:

Biodiversity and Conservation of Woody Plants M. R. Ahuja, S. Mohan Jain, 2017-11-21 This book provides complete comprehensive and broad subject based reviews for students teachers researchers policymakers conservationists and NGOs interested in the biodiversity and conservation of woody plants Forests cover approximately 31 percent of the world's total landmass 93 percent is natural forest and only 7 percent consists of planted trees Forest decline is progressing at an alarming rate worldwide In addition to human activities logging deforestation and exploiting forest lands for agriculture and industrial use a number of other factors including pests and diseases drought soil acidity radiation and ozone are cumulatively contributing to global forest decline The present situation forces us to focus on forest conservation strategies for the present and future Gene conservation and maintaining genetic diversity in forest ecosystems are crucial to the preservation of forest genetic resources This calls for integrated action to implement both the in situ on site preservation of forest stands and ex situ distant from the original site strategies for the conservation of woody plants genetic resources Selected priority areas include 1 assessing patterns of genetic diversity and threats 2 understanding the biological processes regulating genetic diversity 3 assessing the impact of human activities and climate change on genetic diversity and 5 finding methods for prioritizing species and populations for the conservation of forest trees genetic resources All chapters were written by leading scientists in their respective fields which include woody plant diversity ecology and evolution assessment of genetic diversity in forest tree populations conservation planning under climate change and in situ and ex situ strategies including biotechnological approaches for the conservation of woody plants genetic resources *Marine Biodiversity of Costa Rica, Central America* Ingo S. Wehrtmann, Jorge Cortés, 2008-12-28 Life began in the sea and even today most of the deep diversity of the planet is marine This is often forgotten especially in tropical countries like Costa Rica renowned for their rain forests and the multitude of life forms found therein Thus this book focusing on marine diversity of Costa Rica is particularly welcome How many marine species are there in Costa Rica The authors report a total of 6 777 species or 3.5% of the world's total Yet the vast majority of marine species have yet to be formally described Recent estimates of the numbers of species on coral reefs range from 1.9 million so that the true number of marine species in Costa Rica is certainly far higher In some groups the numbers are likely to be vastly higher because to date they have been so little studied Only one species of nematode is reported despite the fact that it has been said that nematodes are the most diverse of all marine groups In better studied groups such as mollusks and crustaceans reported numbers are in the thousands but even in these groups many species remain to be described Indeed the task of describing marine species is daunting if there really are about 9 million marine species and Costa Rica has 3.5% of them then the total number would be over 300 000 Clearly so much remains to be done that new approaches are needed Genetic methods have enormous promise in this regard **In Search Of Biohappiness: Biodiversity And Food, Health And Livelihood Security (Second Edition)** M S

Swaminathan,2015-04-29 In Search of Biohappiness deals with methods of converting agro biodiversity hotspots into happy spots This involves concurrent attention to conservation and sustainable and equitable use Bioresources constitute the feedstock for the biotechnology industry The aim of the book is to promote an era of biohappiness based on the conversion of bioresources into jobs and income in an environmentally sustainable manner The scope of Biohappiness extends to include all aspects of conservation such as in situ ex situ and community conservation and also covers conservation issues relating to mangroves and other coastal bioresources whose importance has grown with the emerging possibility of significant sea level increase from global warming Concrete examples of how local tribal families have taken to the establishment of gene seed grain and water banks in villages thus linking conservation cultivation consumption and commerce in a mutually reinforcing manner are provided in this book Since the first edition biohappiness is now universally considered to be the major objective of research and development in the field of biodiversity This edition brings the position up to date and furthers the cause of biohappiness through the inclusion of a new section on its latest developments Aquatic Biodiversity II H.
