The Fractional Calculus Theory and Applications of Differentiation and Integration to Arbitrary Order

,1974-09-05 In this book we study theoretical and practical aspects of computing methods for mathematical modelling of nonlinear systems A number of computing techniques are considered such as methods of operator approximation with any given accuracy operator interpolation techniques including a non Lagrange interpolation methods of system representation subject to constraints associated with concepts of causality memory and stationarity methods of system representation with an accuracy that is the best within a given class of models methods of covariance matrix estimation methods for low rank matrix approximations hybrid methods based on a combination of iterative procedures and best operator approximation and methods for information compression and filtering under condition that a filter model should satisfy restrictions associated with causality and different types of memory As a result the book represents a blend of new methods in general computational analysis and specific but also generic techniques for study of systems theory and its particular branches such as optimal filtering and information compression Best operator approximation Non Lagrange interpolation Generic Karhunen Loeve transform Generalised low rank matrix approximation Optimal data compression Optimal nonlinear filtering

Hansen, 2003 *Model-oriented Systems Engineering Science* Duane W. Hybertson, 2016-04-19 Systems engineering SE is experiencing a significant expansion that encompasses increasingly complex systems However a common body of knowledge on how to apply complex systems engineering CSE has yet to be developed A combination of people and other autonomous agents crossing organization boundaries and continually changing these hybrid systems are less predictable while being more self organizing and adaptive than traditional systems The growing pains of this evolution and the ever widening reach of SE technology require an effective foundation for integrating traditional and complex engineering methods addressing machine and human interaction as well as scaling up and down from nano scale to the macro system of systems level Model oriented Systems Engineering Science A Unifying Framework for Traditional and Complex Systems addresses solutions to that expansion and integration problem This text takes advantage of better understood systems science SS to support the transition identifying and using commonalities between complex systems and other sciences such as biology sociology cognitive science organizational theory and computational science The author defines Model oriented Systems Engineering Science MOSES an organized system that selects appropriate information from these disciplines and unifies it into a coherent framework The

result is a seamless approach to the class of systems across the extended scope of the new SE a foundation upon which to develop an enhanced and unified SE Modeling orientation MO provides a common perspective on the entire SES SE enterprise including all supporting sciences engineering for the full range of traditional complex and hybrid systems and their management This book extends existing modeling approaches into an MO that views all science artifacts and engineering artifacts as models of systems It organizes them into a virtual structured repository called the SE model space effectively a container for the accumulating body of SE and SES knowledge in the form of models and patterns By organizing and integrating all these elements into a common framework the author makes the material not only easily accessible but also immediately applicable and provides a well grounded basis for future growth and evolution of the SE discipline
