Encyclopedia of Sciences and Religions Anne Runehov, Luis Oviedo, 2013-05-18 To all who love the God with a 1000 names and respect science In the last quarter century the academic field of Science and Theology Religion has attracted scholars from a wide variety of disciplines The question is which disciplines are attracted and what do these disciplines have to contribute to the debate In order to answer this question the encyclopedia maps the self identified disciplines and religious traditions that participate or might come to participate in the Science and Religion debate This is done by letting each representative of a discipline and tradition answer specific chosen questions They also need to identify the discipline in relation to the Science and Religion debate Understandably representatives of several disciplines and traditions answered in the negative to this question Nevertheless they can still be important for the debate indeed scholars and scientists who work in the field of Science and Theology Religion may need knowledge beyond their own specific discipline Therefore the encyclopedia also includes what are called general entries Such entries may explain specific theories methods and topics The general aim is to provide a starting point for new lines of inquiry It is an invitation for fresh perspectives on the possibilities for engagement between and across sciences again which includes the social and human sciences and religions and theology This encyclopedia is a comprehensive reference work for scholars interested in the topic of Science and Religion It covers the widest spectrum possible of academic disciplines and religious traditions worldwide with the intent of laying bare similarities and differences that naturally emerge within and across disciplines and religions today The A Z format throughout affords easy and user friendly access to relevant information Additionally a systematic question answer format across all Sciences and Religions entries affords efficient identification of specific points of agreement conflict and disinterest across and between sciences and religions The extensive cross referencing between key words phrases and technical language used in the entries facilitates easy searches We trust that all of the entries have something of value for any interested reader Anne L C Runehov and Lluís Oviedo

Scholarly World, Private Worlds Karl Dietrich Fezer, 2001-12-24 BLUE INK Review STARRED REVIEW Scholarly World Private Worlds Thinking Critically About Science Religion and Your Private Beliefs Karl D Fezer Xlibris 434 pages paperback 24 99 9781401034146 Reviewed March 2014 Informal logic is a discipline that examines the validity of the arguments we encounter in everyday discourse from political speeches to editorials to posts on social media Karl D Fezer's work is nothing less than a tour de force of informal logic This important book investigates under what conditions our beliefs are warranted and the limits of the methods by which we derive them The author is not concerned with validating or debunking any particular worldview religious or scientific but with examining the grounds on which we form the views that we do in fact hold The book's first part discusses the distinction between the views we harbor in our inmost hearts and their extension into the social realm where we encounter a multiplicity of views different from our own In the second part Fezer

presents good reasons why we might doubt the beliefs we hold In his third section he discusses methods by which we might form views that are worthy of being called rational The final section covers the differences between science and religion and the limitations inherent in attempts to reconcile competing worldviews Fezer also contributes to the debate around teaching Creationism in schools He makes an argument for limiting the curriculum to accounts of the natural world that do not introduce supernatural principles However Fezer is not anti religion and he discusses both religious and humanistic viewpoints neutrally The author notes that he is attempting to fill a void in university liberal arts curricula As such the book has the structure of a textbook complete with questions for further study in an appendix However it is written in crisp readable prose Readers who aren't intimidated by the textbook style will find a cogent forceful presentation that is likely to challenge his or her convictions in a non threatening and highly impressive manner
