Science Fiction by Scientists Michael Brotherton, 2016-11-15 This anthology contains fourteen intriguing stories by active research scientists and other writers trained in science Science is at the heart of real science fiction which is more than just westerns with ray guns or fantasy with spaceships The people who do science and love science best are scientists Scientists like Isaac Asimov Arthur C Clarke and Fred Hoyle wrote some of the legendary tales of golden age science fiction Today there is a new generation of scientists writing science fiction informed with the expertise of their fields from astrophysics to computer science biochemistry to rocket science quantum physics to genetics speculating about what is possible in our universe Here lies the sense of wonder only science can deliver All the stories in this volume are supplemented by afterwords commenting on the science underlying each story

Defending the Faith Henry Morris, 1999-09 When Jude wrote his Epistle he implored believers in all ages to be diligent in their defense of the faith And the faith clearly was and is belief in Jesus Christ as Creator and Redeemer So just as Solomon assured us that there is nothing new under the sun we are not surprised that there are attacks on the gospel today Jude was just as familiar with these enemies of the gospel in his time Now author Henry Morris offers up a brand new look at these age old attacks on the faith tackling a breathtaking range of issues from science and the Bible to liberal criticisms of the Bible A powerful weapon in the battle for truth *Defending the Faith* doesn't shrink from the fight but rather speaks the truth in love

A Literary Symbiosis Hazel Pierce, 1983-11-16 A Literary Symbiosis studies the merger of science fiction fantasy and mystery fiction from historical and critical perspectives Pierce examines the problems and expectations raised by the various literary labels particularly as regards definition theme conventions stock characters and setting While she admits the difficulties inherent in merging idea oriented speculative science fiction with the situation specific and present time oriented

mystery story she argues that the two genres have much in common The book examines critically the elements of mystery fiction which have been integrated with varying degrees of success into science fiction fantasy This evaluation focuses on individual authors and novels or short stories which contributed to the original modes and to their synthesis *The Tangled Tree* David Quammen, 2019-08-06 In this New York Times bestseller and longlist nominee for the National Book Award our greatest living chronicler of the natural world The New York Times David Quammen explains how recent discoveries in molecular biology affect our understanding of evolution and life's history In the mid 1970s scientists began using DNA sequences to reexamine the history of all life Perhaps the most startling discovery to come out of this new field the study of life's diversity and relatedness at the molecular level is horizontal gene transfer HGT or the movement of genes across species lines It turns out that HGT has been widespread and important we now know that roughly eight percent of the human genome arrived sideways by viral infection a type of HGT In *The Tangled Tree* the grandest tale in biology David Quammen presents the science and the scientists involved with patience candor and flair Nature We learn about the major players such as Carl Woese the most important little known biologist of the twentieth century Lynn Margulis the notorious maverick whose wild ideas about mosaic creatures proved to be true and Tsutomu Wantanabe who discovered that the scourge of antibiotic resistant bacteria is a direct result of horizontal gene transfer bringing the deep study of genome histories to bear on a global crisis in public health David Quammen proves to be an immensely well informed guide to a complex story The Wall Street Journal In *The Tangled Tree* he explains how molecular studies of evolution have brought startling recognitions about the tangled tree of life including where we humans fit upon it Thanks to new technologies we now have the ability to alter even our genetic composition through sideways insertions as nature has long been doing *The Tangled Tree* is a source of wonder Quammen has written a deep and daring intellectual adventure The Boston Globe

Robert Silverberg Charles Stross John Kessel Gregory Benford and many other talented authors of SF as well as thorough summations of the year and a recommended reading list Biological Nitrogen Fixation Frans J. de Bruijn, 2015-06-12

Nitrogen is arguably the most important nutrient required by plants. However, the availability of nitrogen is limited in many soils, and although the earth's atmosphere consists of 78.1% nitrogen gas (N₂), plants are unable to use this form of nitrogen. To compensate, modern agriculture has been highly reliant on industrial nitrogen fertilizers to achieve maximum crop productivity. However, a great deal of fossil fuel is required for the production and delivery of nitrogen fertilizer. Moreover, carbon dioxide (CO₂), which is released during fossil fuel combustion, contributes to the greenhouse effect, and run-off of nitrate leads to eutrophication of the waterways. Biological nitrogen fixation is an alternative to nitrogen fertilizer. It is carried out by prokaryotes using an enzyme complex called nitrogenase, and results in atmospheric N₂ being reduced into a form of nitrogen that diazotrophic organisms and plants are able to use (ammonia). It is this process and its major players which will be discussed in this book. Biological Nitrogen Fixation is a comprehensive two-volume work bringing together both review and original research articles on key topics in nitrogen fixation. Chapters across both volumes emphasize molecular techniques and advanced biochemical analysis approaches applicable to various aspects of biological nitrogen fixation. Volume 1 explores the chemistry and biochemistry of nitrogenases, nif gene regulation, the taxonomy, evolution, and genomics of nitrogen-fixing organisms, as well as their physiology and metabolism. Volume 2 covers the symbiotic interaction of nitrogen-fixing organisms with their host plants, including nodulation and symbiotic nitrogen fixation, plant and microbial omics, cyanobacteria, diazotrophs, and non-legumes, field studies, and inoculum preparation, as well as nitrogen fixation and cereals. Covering the full breadth of current nitrogen fixation research and expanding it towards future advances in the field, Biological Nitrogen Fixation will be a one-stop reference for microbial ecologists and environmental microbiologists, as well as plant and agricultural researchers working on crop sustainability.

Earth, Life, and System Bruce Clarke, 2015-07-01 A strikingly original collection of essays which places the work and broad intellectual interests of Lynn Margulis in a variety of contexts. Stacy Alaimo, author of *Exposed: Environmental Politics and Pleasures in Posthuman Times*, exploring the broad implications of evolutionary theorist Lynn Margulis's work, this collection brings together specialists across a range of disciplines from paleontology, molecular biology, evolutionary theory, and geobiology to developmental systems theory, archaeology, history of science, cultural science studies, and literature and science. Addressing the multiple themes that animated Margulis's science, the essays within take up variously astrobiology and the origin of life, ecology and symbiosis from the microbial to the planetary scale, the coupled interactions of earthly environments and evolving life in Gaia theory and earth system science, and the connections of these newer scientific ideas to cultural and creative productions. Altogether, *Earth, Life, and System* offers a series of often fascinating, always stimulating, invariably enriching essays in an incisive and unruly science and its existential repercussions. It is a fitting tribute to one of modern science's most generative and productive independent spirits.

Pirate Philosophy Gary Hall, 2016-04-15 In *Pirate Philosophy* Gary Hall considers whether the fight against the neoliberal corporatisation of higher education in fact requires scholars to transform their own lives and labour Drawing on such phenomena as peer to peer file sharing and anticopyright pro piracy movements Hall explores how those in academia can move beyond finding new ways of thinking about the world to find instead new ways of being theorists and philosophers in the world

Harcourt Science: Earth science [grade] 6, units C and D, teacher's ed, 2000 *Afterlives of Affect* Matthew C. Watson, 2020-07-27 In *Afterlives of Affect* Matthew C Watson considers the life and work of artist and Mayanist scholar Linda Schele 1942-98 as a point of departure for what he calls an excitable anthropology As part of a small collective of scholars who devised the first compelling arguments that Maya hieroglyphs were a fully grammatical writing system Schele popularized the decipherment of hieroglyphs by developing narratives of Maya politics and religion in popular books and public workshops In this experimental person centered ethnography Watson shows how Schele's sense of joyous discovery and affective engagement with research led her to traverse and disrupt borders between religion science art life death and history While acknowledging critiques of Schele's work and the idea of discovery more generally Watson contends that affect and wonder should lie at the heart of any reflexive anthropology With this singular examination of Schele and the community she built around herself and her work Watson furthers debates on more than human worlds spiritualism modernity science studies affect theory and the social conditions of knowledge production

Make It New Barry M. Katz, 2015-09-11. The role of design in the formation of the Silicon Valley ecosystem of innovation. California's Silicon Valley is home to the greatest concentration of designers in the world: corporate design offices at flagship technology companies and volunteers at nonprofit NGOs, global design consultancies, and boutique studios, research laboratories, and academic design programs. Together they form the interconnected network that is Silicon Valley. Apple products are famously designed in California, but as Barry Katz shows in this first ever extensively illustrated history, the role of design in Silicon Valley began decades before Steve Jobs and Steve Wozniak dreamed up Apple in a garage. Offering a thoroughly original view of the subject, Katz tells how design helped transform Silicon Valley into the most powerful engine of innovation in the world. From Hewlett-Packard and Ampex in the 1950s to Google and Facebook today, design has provided the bridge between research and development, art and engineering, technical performance and human behavior. Katz traces the origins of all of the leading consultancies, including IDEO, Frog, and Lunar, and shows the process by which some of the world's most influential companies came to place design at the center of their business strategies. At the same time, universities, foundations, and even governments have learned to apply design thinking to their missions. Drawing on unprecedented access to a vast array of primary sources and interviews with nearly every influential design leader, including Douglas Engelbart, Steve Jobs, and Don Norman, Katz reveals design to be the missing link in Silicon Valley's ecosystem of innovation.
