Explain how the hormone insulin controls blood glucose concentration			 The diagram illustrates the homeostatic control of blood glucose levels. It begins with a plate of food (a burger and fries) at the top left. An arrow points from the food to the small intestine, where a label states: "Glucose is absorbed from the small intestine after digestion of food." From the small intestine, an arrow labeled "glucose" points into the bloodstream. This leads to a label: "Blood glucose concentration rises." This rise triggers the pancreas, shown as a yellowish organ, to release insulin, indicated by a label: "Pancreas responds to high blood glucose by releasing insulin." Insulin then acts on the liver and muscle tissues, shown as brown and pink organs respectively, to lower the glucose levels. A final label at the bottom left states: "Blood glucose concentration falls to normal," completing the feedback loop.
