

"The Digestive Process Begins" and "Final Digestion and Absorption" - Grade 7

Pearson-Prentice Hall, published 2005.

Learning Objective: The goal of this two to four day exemplar is to give teachers multiple pathways to careful reading of a typical middle school science textbook with their students. All of these suggestions, used alone or in any combination the teacher chooses, will provide students the opportunity to use the reading and writing habits they need to employ on a regular basis to absorb important content — in this case, about the human digestive system. By reading and rereading the passage closely, and focusing their reading through either a series of questions and discussion about the text or the structured journal approach outlined here, students will come away with a working knowledge of the digestive system, its parts, and how they function together.

Initially, teaching this way will take much more time than swiftly reviewing textbook content and key ideas with students through an oral exchange. Content area teachers, tasked with covering a course full of objectives might legitimately feel they cannot afford this time, but the learning students will achieve when they can access the textbook content on their own and with confidence will be far more durable and deep. If content area teachers regularly insist on students reading the text for full understanding as this exemplar models, in the long run, teachers will be able to teach much more rich and sophisticated content than they currently can. They can do so because they know the students have mastered the basics in the course textbook.

Reading Task: *This close reading approach, whether done by answering questions and performing activities that are based on the text or by writing a structured journal (where the students capture what they think is most important, where they are responsible for tracking what they do not understand, and where they work to make connections to other science they have learned), forces students to use the text as a source of information. It may make sense to notify students that the text is densely packed with ideas, and they are not expected to understand it fully on a first reading—that they can expect to struggle and reread. Some students may be frustrated, but all students need practice in doing their best to stay with something they do not initially understand and to learn to use the tools provided by a textbook.*

Depending on the difficulties of a given subsection, what points the teacher wants to emphasize, and the teacher's knowledge of the fluency abilities of students, there might be more or less rereading or oral reading. What is important is to allow all students to interact with challenging text on their own as frequently and independently as possible. The teacher should point out that text is bolded where the textbook authors bolded it in the original for emphasizing key ideas.

Vocabulary Task: *Many of the meanings of words in the exemplar text can be discovered by students from careful reading of the context in which they appear. In particular, content words for this topic are carefully defined and pronunciation support offered by the textbook authors when they make their first appearance. Teachers can use discussions to model and reinforce how to learn vocabulary from contextual clues, and students must be held accountable for engaging in this practice. Where it is judged this is not possible, underlined words are defined briefly for students to the right of the text in a separate column. At times, this is all the support these defined words need. At other times,*

particularly with abstract words, teachers will need to spend more time explaining and discussing them. Given how crucial vocabulary knowledge is for academic and career success, it is essential that these high value words be discussed and lingered over during the instructional sequence even if they are not directly connected to the topic of the lesson.

Discussion Task: *Students will discuss each section in depth with their teacher and their classmate(s), after having performed activities that help develop an understanding of the digestive system. The goal of the discussion is for the teacher to ensure that students are confident about how the digestive system works and have a grasp of the most important elements. The reason for the independent work coming in advance of the discussions is to foster student confidence when encountering complex text and to reinforce the skills they have acquired regarding how to build and extend their understanding of a text. A general principle is to always reread the passage that provides evidence for the question under discussion. This gives students another encounter with the text, helping them develop fluency and reinforcing their use of text evidence.*

Writing Task: *Students will be held accountable for the content of these sections either through their work in developing a structured journal or through their answers to the questions posed, or best of all — through both. While students should be held accountable for expressing themselves clearly and providing the textual evidence for their answer, there is no formal writing assignment associated with this exemplar. Teachers might afford students the opportunity to revise their journals or question responses after participating in classroom discussion or even rewrite their explanation after receiving teacher feedback, allowing them to refashion both their understanding of the text and their expression of that understanding.*

Text Selection: This exemplar text, taken from a widely used middle school science series, was chosen because of its widespread use and its practical content. It is intended to stand as an example of how to engage students more deeply than is customary in textbook reading and to hold them accountable when doing so.

Outline of Lesson Plan: This lesson offers a "mix and match" approach to the textbook selection. It is intended to demonstrate several different methods that teachers can in turn modify to their own classroom materials and purposes. Because it is so flexibly designed, the amount of time spent on the activities will vary widely. Below is our recommended sequence, which would take 2-4 days:

Examining the Text Structure (comes first in any sequence)

Because teaching students to observe and use text structure when reading textbooks is so critical a goal, the two sections have been reworded and illustrated below. This is to be used by the user as a model. © 2005 Pearson Education, Inc. All rights reserved. The content of this material and its structure are not to be used for any other purpose.
